jjencode - Encode any JavaScript program using only symbols

jjencode demo

Be aware

Using jjencode for actual attack isn't good idea.

- Decode easily. jjencode is not utilitarian obfuscation, just an encoder.
- Too characteristic. Detected easily.
- Browser depended. The code can't run on some kind of browsers.

Enter any JavaScript source: `alert("Hello, JavaScript" )`

global variable name used by jjencode : `palindrome`
