Hello participants of Mailing List.

Let's talk about vulnerabilities in bots of search engines. When you last time found a vulnerability in search engine's bot :-) - it's very rare case.

◀ ▶

◀ ▶

◀ ▶

Vulnerability of GoogleBot and Yahoo! Slurp consist in that, that they support and index such addresses, and vulnerability of Mozilla and IE, that they allow to go to such addresses. To this attack vulnerable are GoogleBot, Yahoo! Slurp, Mozilla 1.7.x and IE6. New browsers, such as Firefox 3, Opera 9 and Chrome are not vulnerable.

Real examples of this attack (indexed by Google):

[<http://www.google.com.ua/search?q=inurl:www.infostore.org+inurl:www.tab.net.ua&filter=0>](<http://www>

Vulnerable is GoogleBot.

Vulnerable is Yahoo! Slurp.

Vulnerable are Mozilla 1.7.x and previous versions.

Vulnerable version is Internet Explorer 6 (6.0.2900.2180) and previous versions. And potentially IE7 and IE8.

Best wishes & regards, MustLive Administrator of Websecurity web site <http://websecurity.com.ua>
