This project hosts the DOMinator for Firefox.

DOMinator is a Firefox based software for analysis and identification of DOM Cross Site Scripting issues using dynamic runtime tainting model on strings.

Warning: Do not use it on vanilla Firefox. It won't work! Use only on the DOMinator for Firefox version.

Before downloading anything be sure to read the [instructions](#)

[[()UPDATE: DOMinator VA]]()

If you want to try it without installing it, Mario Heiderich setup a Ubuntu Virtual Appliance with DOMinator already installed.

Read [DOMinatorVirtualAppliance](#) wiki page for a list of mirrors and instructions.
