README.md

Blob 6dbb7156ce50, 1393 bytes, at commit 2ffc2fcc1c10.

This repository contains the artifacts for the paper **AutoFail: Breaking Web Boundaries using Android's Autofill Framework**.

Adapt

The `ADAPT` directory contains the architecture to run the differential testing described in Sec. 4. `ADAPT/server/results.db` contains the results of our testing that we used to produce the analysis discussed in Sec 5.

RealWorldAnalysis

The `RealWorldAnalysis` directory contains the artifacts to reproduce the real-world analysis discussed in Sec 8., alongside the data produced by such tools that we used in the paper. In particular, `RealWorldAnalysis/IframeConfigurationAnalysis` and

`RealWorldAnalysis/HeaderConfigurationsAnalysis` contain the artifact for the analysis discussed in Sec 8.1 paragraph **Iframe Analysis.** and paragraph **Embeddability Analysis** respectively.

CrossContextAccountOracle

The `CrossContextAccountOracle` directory contains the source code of a PoC app that performs the **Cross-Context Account Oracle** discussed in Sec 6.

Mitigation

The `Mitigation` directory contains the source code of a PoC app that performs the autofill using the secure interaction flow to mitigate the **Cross-Context Account Oracle** described in Sec 7.

Dependencies

Run `./setup.sh` to install the dependencies.

Emulator

Run `./emulator/launch_emulator.sh` to install and run the emulator (macOS required).
