Empower invention without friction

Industry-leading SAST, SCA, and secrets scanning in one high signal AppSec platform.

[\[image: fi customizable icon\]](#)

Prevention at the Source

Secure code as it's written. Built-in guardrails guide safe fixes before code ships.

[\[image: fi transparent icon\]](#)

Make Zero False Positives a Reality

AppSec teams triage 80% fewer false positives across SAST and SCA. Backlogs shrink, and engineering velocity climbs.

[\[image: fi extensible icon\]](#)

Smarter as You Build

AI learns your code context to eliminate false positives and prioritize reachable vulnerabilities – validated by 95% of security reviewers across 6M+ findings.

[!

Semgrep Code (SAST)

Find and fix real vulnerabilities.

Multimodal AI detection combines static analysis and AI reasoning to uncover OWASP risks, business logic flaws, and IDORs that traditional scanners miss.

Learn about Code](<https://semgrep.dev/products/semgrep-code>) [!

Semgrep Supply Chain (SCA)

Safely fix only what's exploitable.

Reachability analysis flags the dependencies that actually matter, reducing false positives in high and critical severity findings by up to 98%.

Learn about Supply Chain](<https://semgrep.dev/products/semgrep-supply-chain-old>) [!

Semgrep Secrets Scanning

Stop secrets before they ship.

Semantic analysis, entropy analysis, and validation detect hardcoded secrets and real credentials, blocking unsafe merges by default.

Learn about Secrets](<https://semgrep.dev/products/semgrep-secrets>)

[Learn more about MCP](#)

[\[image: MCP Server Illustration\]](#)

Supported workflows and integrations:

- CLI, CI/CD, and IDEs (VS Code, JetBrains)

- PR checks in GitHub, GitLab, Bitbucket, Azure
- Jira and ticketing workflow routing
- APIs and webhooks
- MCP integrations for AI tools like Cursor and Replit
- Cloud context via partners including Palo Alto Networks, Sysdig, StackHawk

[Learn More](#)

!

For Developers

- Clear, actionable findings
- Fix issues in PRs, CI, IDEs, or AI tools
- Ship faster with confidence

For AppSec Teams

- High signal results across SAST, SCA, and secrets scanning
- Scalable guardrails powered by rules and AI
- Less noise, real risk reduction

For CISOs

- Measurable security outcomes
- Unified visibility across humans and AI
- Proactive security without slowing the business

ACRISURE®

"Semgrep Assistant helped surface valuable context and recommendations to developers, aiding in the quick identification of false positives and remediation of legitimate findings. There were times where Assistant just felt magical."

[\[image: Picture of Allan Reyes\]](#)

Allan Reyes

Staff Security Engineer

Vanta

[\[image: Logo for Vanta\]](#)

"We use Semgrep Assistant to provide remediation guidance to our developers directly in PR comments. Semgrep Assistant gives them additional context that helps them fix vulnerabilities quicker."

[\[image: Picture of Aleksandr Krasnov\]](#)

Aleksandr Krasnov

Staff Security Engineer

Thinkific

[\[image: Logo for Thinkific\]](#)

"The ability to have Assistant remember what I told it and automatically triage for me in the future is game changing. I have to spend a lot of time verifying the validity of vulnerabilities

and being able to essentially hit the "save" button on the work I've done and just pass it on to Assistant has really helped streamline my triage process."
