Featured Details

Multiple ways to consume Secunia Research

Secunia delivers software security research that provides reliable, curated and actionable vulnerability intelligence. Organizations can expect to receive standardized, validated and enriched vulnerability research on a specific version of a software product. Secunia Research supports four solutions:

[image: Software Vulnerability Research]

Software Vulnerability Research

Software Vulnerability Research utilizes Secunia Research to drive awareness of vulnerabilities matching your specified criteria

[Learn More](#)

[image: Software Vulnerability Manager]

Software Vulnerability Manager

Software Vulnerability Manager uses Secunia Research data to identify, prioritize and patch known vulnerable software detected in your environment

[Learn More](#)

[image: Data Platform]

Data Platform

Data Platform leverages Secunia Research to provide high-level insights based on major or minor versions of software in your normalized inventory

How it works

Accurate, reliable vulnerability insights at your fingertips

The Secunia Research team from Flexera is comprised of several security specialists who conduct vulnerability research in various products in addition to testing, verifying and validating public vulnerability reports. Since its inception in 2002, the goal of the Secunia Research team is to provide the most accurate and reliable source of vulnerability intelligence.

Delivering the world's best vulnerability intelligence requires skill and passion. Team members continually develop their skills exploring various high-profile closed and open-source software using a variety of approaches, focusing chiefly on thorough code audits and binary analysis. The team has received industry recognition, including naming members to [Microsoft's Most Valuable Security Researchers](#) list.

Secunia researchers discover hard-to-find vulnerabilities that aren't normally identified with techniques such as fuzzing, and the results have been impressive. Members of the Secunia Research team have discovered critical vulnerabilities in products from vendors including Microsoft, Symantec, IBM, Adobe, RealNetworks, Trend Micro, HP, Blue Coat, Samba, CA, Mozilla and Apple.

The team produces invaluable security advisories based on research of the vulnerabilities affecting any given software update. Sometimes a single update can address multiple vulnerabilities of varying criticalities and threats; but these advisories aggregate and distill findings down to a single advisory perfect for the prioritization of patching efforts within [Software Vulnerability Manager](#). Criticality scores are consistently applied along with details around attack vector and other valuable details within [Software Vulnerability Research](#). Illegitimate vulnerability reports are also investigated and rejected so you can focus only on what truly matters.

Informing IT, Transforming IT

Industry insights to help keep you informed

Webinar ### How to see the software risks others miss Most teams are tracking vulnerabilities—but critical risks still go unseen. Learn how to close the visibility gap and prioritize what matters most.

Webinar ### From alert to action: Improve vulnerability management Learn how to gain actionable insights to manage vulnerabilities, understand threats and speed up remediation with Flexera's SDR and SVM.

Webinar ### Stay ahead of cyber threats: Flexera's latest vulnerability insights Join us for this session where we'll explore the latest findings from the Flexera Monthly Vulnerability Insights Report.

Report ### Flexera Annual Software Vulnerability and Threat Intelligence Report Discover key cybersecurity trends in the 2024 Flexera Software Vulnerability and Threat Intelligence Report. Get insights on vulnerabilities, zero-days, and vendor risk to strengthen your security strategy.
