A story of the passive aggressive sysadmin of AEM - Speaker Deck

A story of the passive aggressive sysadmin of AEM

By Frans Rosén

Adobe Experience Manager is an enterprise CMS with a troubled history. It was created with the angle of high customization factor, enabling consulting firms to deploy it all over the world for huge customers.

Then came security.

Frans will go through some terrible default configuration mistakes, Adobe's love for bad Flash and how a sysadmin accidentally exposed an international multi billion dollar company using only sad thoughts.

About speaker

Frans Rosén is a tech entrepreneur, bug bounty hunter and a Security Advisor at Detectify, a security service for developers. He's a frequent blogger at Detectify Labs and a top ranked participant of bug bounty programs, receiving some of the highest bounty payouts ever on HackerOne.

Frans was recently featured as #2 on Hackread's list of 10 Famous Bug Bounty Hunters of All Time and the results of his security research has been covered in numerous international publications such as Observer, BBC, Ars Technica, Wired and Mashable.
