New GSM vulnerability

Posted by **m-sec.net** on August 17th, 2012

[image: [square_logo_eusec](#)]

I know I haven't written on my blog for a long time (at least on the English version of it) so here comes an update.

I have discovered a new vulnerability in the GSM network and I'm going to present it at [EUSecWest](#) which is held in Amsterdam, Netherlands on September 19/20. The presentation title is "**Using HTTP headers pollution for mobile networks attacks**" and basically I'm going to show how you could exploit the operator's WAP homepage and perform attacks on a specific MSISDN.

There are also some other interesting talks, mostly on mobile security and let's not forget about [Mobile PWN2OWN](#).

So, if you want to find some new interesting things about mobile security, then please [register for EUSecWest](#)!

See you in Amsterdam!
